PREFACE

This collection of data is published in response to the need expressed by the following resolution passed by the International Meteorological Conference in session at Utrecht in September 1923:

RESOLUTION

13. (4) V. Considering Professor Exner's proposal about the calculation of the correlations between weather-anomalies in regions far from each other, the Conference thinks that publication of long and homogeneous series of observations in the form of monthly means of pressure, temperature, and rainfall would be of the highest importance for the study of the general circulation of the atmosphere. This publication should comprise a small number of stations at a mutual distance of 500 to 1000 kilometers, preferably belonging to the Réseau Mondial, and if these should fail, other stations with a longer homogeneous series. It proposes that the various meteorological institutes should establish such series up to the year 1920 and invites the following gentlemen to see to the execution of this Resolution.

Dr. Walker for the stations of Asia;

Prof. Exner for the stations of Europe;

Mr. Clayton for the stations of America;

Dr. Simpson for the stations of Africa, Australia and the oceans.

Meteorology stands deeply indebted to Mr. John A. Roebling for providing the means to publish this long-desired collection of fundamental data, which cannot but be of great use in future theoretical and practical researches.

EDITORIAL NOTE

The data have been arranged for publication alphabetically, first under the grand divisions of the earth as Africa, Asia, Europe, etc., then by countries under each division and finally by stations in each country; except in the case of Australia, Africa and the Indian Ocean, where it was found more practical to arrange the stations alphabetically under the larger divisions.

The grand divisions and the countries are given under their English names, but the names of the stations have been taken as nearly as possible to accord with the spelling used in the countries where they are located, and the English equivalent is given in parentheses.

The units used are those of the countries where the observations were made, and are given as they were received.

Owing to the diversity of units used, and to the fact that explanation of the methods and the hours of observation were best arranged by countries, it was not considered feasible to publish the data by 10° squares of latitude and longitude, as is done in the Réseau Mondial. An index of the stations according to the Réseau Mondial system is provided at the end of the publication.

The material published has been collected, in so far as possible, from official sources responsible for the observations. In addition a large part of the data has been checked against neighboring stations by the various collectors, in order to eliminate errors which easily creep in when copying so large a mass of material. Many such errors were found and corrected by correspondence. In addition, small breaks in the continuity of the records were disclosed, and some of these were corrected by correspondence with the bureaus and offices responsible for the records. The causes of others could not be found, and they were left without change.

The records coming from so many different sources were arranged under many different headings. They have been rearranged according to a uniform system.

For reasons of economy, the notes and explanations are placed together in the first part of the publication, and the tables of data follow. The notes and the tables are arranged in the same alphabetical order, so that it will be easy to turn from one to the other. For some of the stations the notes and explanations are very full, for

others there is an absence of explanation. This difference could not be corrected without unduly delaying the publication of the data.

In general an effort was made by the compilers of the data to reduce the monthly and annual means to a uniform comparable series, in so far as the hours of observation and the height of the barometer were concerned.

The totals of precipitation are understood to include all forms of condensed moisture; as rain, snow, sleet, hail, dew, frost, etc. The snow, sleet, hail, frost are given in their equivalents of water by melting, weighing or estimating. In the tropics, the precipitation is chiefly rainfall, in temperate latitudes it is rain and snow, and in the polar regions chiefly snow.

For many of the stations averages of the series, or normals, were given by the compilers. For others they were computed by the writer.

Because relations between meteorological conditions and solar changes are frequently a subject of research, an appendix is added to the volume giving the relative sun-spot numbers of Wolf and Wolfer as revised by Dr. A. Wolfer of Zürich. Huntington, Clayton, and Bauer have all independently found an annual period in these numbers, the results of which are given below in percentages of the mean value:

```

The mean departures of the results of Bauer and Clayton from the annual mean are given above. When these are subjected to harmonic analysis they show an amplitude of 6.6 per cent with epoch about April 1. The computed values for each month are given below

[&]quot;Earth and Sun," by Ellsworth Huntington, New Haven, 1923, p. 249. The results given here are smoothed by the formula $\frac{a+2b+c}{4}$. The means are for the years 1749-1913.

³ Earth and Sun," loc. cit., p. 229, chapter by H. H. Clayton. The means are for the interval 1856-1912.

^{*} Studies Concerning the Relations between the Activity of the Sun and of the Earth's Magnetism," by Louis A. Bauer and C. R. Duval, *Terres, Magnet. and Atmos. Elec.*, Dec. 1925. The means are for the interval 1913-1922.

the observed values. They show a range of 13 per cent from a minimum about January 1 to a maximum about July 1.

A comparison of Wolfer's observations with those made by me at Canton, Massachusetts, shows that the annual variation is considerably less at Canton so that the period is no doubt of terrestrial origin and probably arises from the lower visibility in Europe during winter on account of the increased cloudiness combined with the low altitudes of the sun.

It seems probable then that Wolfer's numbers should be multiplied by these percentages with opposite signs to those given and added to the observed numbers, at least since the year 1856.

H. H. CLAYTON.

NOTE TO FIRST REPRINT

The first printing of these "World Weather Records" was exhausted about the year 1936, and until the present time funds have not been available to print more copies although the demand was continuous.

This First Reprint was made possible through the generosity of Mr. John A. Roebling, who also provided the means to publish the original edition.

In 1929 a list of errata discovered in the first printing of this volume was published as a separate pamphlet, with the following preface:

"The collectors of the Errata for the WORLD WEATHER RECORDS are greatly indebted to the officials in charge of the various weather services and meteorological observatories of the world who have not only furnished the original data, but most of whom have compared the published data with the originals and sent in corrections. Corrections have also been received from students at various universities who have used the data.

"Many of these corrections are small and well within the probable errors of the observed values, so that the question was raised as to the advisability of publishing small corrections; but it was decided to publish all the corrections received and leave it to the judgment of the students using the data as to what extent corrections were desirable.

"Some of the data have not yet been compared with the originals so that the list is not complete."

Further errata were published as part IV of volume 90 of the Smithsonian Miscellaneous Collections.

In this First Reprint all errors in the figures in both lists, as well as numerous errors reported later to Mr. Clayton, have been corrected. It was not possible, however, to insert the corrections to notes, as the reprinting has been done by photolithography, and in that process it is not possible to correct errors that involve a change in the number of lines on a page. The corrections to notes are therefore printed immediately following this note.

All data after the year 1920 appearing in this volume have been revised and reprinted in "World Weather Records, 1921-1930," Smithsonian Miscellaneous Collections, volume 90.

In short, those using this reprint need look only at the list of changes in notes below; all other known errors are corrected in the tables themselves. For revised data for the years from 1921 on, use Smithsonian Miscellaneous Collections, volume 90.

C. G. Abbot, Secretary, Smithsonian Institution.

CORRECTIONS AND ADDITIONS TO "NOTES AND EXPLANATIONS"

Page

- 7 Bulawayo, Rhodesia. The height previously quoted (4440 ft.) was derived from railway levels. Geodetic Survey has shown that this was 5 ft. too high.
- 22 Salisbury, Rhodesia. The heights previously quoted (Gaol 4835 ft., Meteorological Office 4860 ft.) were derived from railway levels. A resurvey of the area has shown that these were incorrect. The correct heights are 4845 ft. and 4890 ft. There has been no change since September 1921.
- 25 Aden. Note should read: "Height of barometer from start to date has been 98 ft. From August 1880 to July 1890 observations were recorded at 10^h and 16^h; from August 1890 to November 1914 at 8^h; from December 1914 to December 1917 at 6^h 30^m; from January 1918 to date at 7^h. All data were reduced wherever necessary to a single epoch, 8^h (or 10^h 30^m Indian Standard Time) by applying appropriate corrections.
- 29 Cochin. First sentence of note should read: H_b from date of starting the observatory to November 1906 was redetermined and found to be 10 ft.; December 1906 to date, 9 ft.
- 39 A close examination of the Darwin data has disclosed a progressive error extending over some years by which values which are too high have been assigned to that station. The error has been masked by the fact that pressures have actually been rather high in this region in recent years. A new instrument was installed on August 1, 1931.
 - The old barometer was a Kew Pattern, Adie No. 2397, and was one of a batch, four of which have developed errors due to the etching of the inside of the glass tube in the region traversed by the meniscus. To this etched surface the mercury adhered in such a way as to cause little error in a rising barometer. With a falling barometer the meniscus flattened, but this drop was more than offset by the failure of the mercury adhering to the glass to fall appreciably. The net result was a progressive decrease in the diurnal range superimposed upon a slight rise of the 9 a. m. values. A study of the curves suggested the necessity for a correction commencing in the year 1914, just prior to which similar defects had been detected in the other barometers under closer observation in southern districts.
 - Formulae were derived for making the gradually increasing correction between 1914 and 1931.
 - The newly derived data have satisfactorily passed a correlation with neighboring stations and a scrutiny of the frequency distributions of values in the earlier and later years and of the whole record.
 - Corrected values are given in the tables which follow for page 430, for the years 1914 to 1930. The values for the years 1914 to 1924 should be substituted for those given in World Weather Records, Smithsonian Misc. Coll., vol. 79, p. 430.

- 41 Obir, insert:—The "Rainerschuthaus" (2044 m.) lies on a southward sloping flat depression (Mulde) under the Obirgifels, which rises to the N and NW of the observatory to a height of 2144 m. and carries the "Hannwarte."
 - The thermometer is in a white-grained (weissgestrichenen) double louvered wooden shelter on the NNW wall of the house, 3.5 m. above the ground, protected by boards on each side from the direct rays of the sun. Frost (Raureif) formation on the shelter is rare.
 - The ombrometer without a Nipher funnel is about 2.5 m. from the SW wall of the house and in consequence is not well exposed.
 - See the yearly report of the Sonnblickverein, especially Band XVII, 16-22: "Uebersicht ueber die Ergebnesse der meteorologischen Beobachtungen bei dem Berghaus auf dem Obir in Karnten, von J. Hann."
- 41 Sonnblick, insert:—The "Zittelhaus" (3106 m.) stands on the highest point of the ESE to WNW lying ridge of the high Sonnblick. Toward the NNE there is a steep descent toward the valley (Rauristal). The southern slope is glaciated. Local winds are felt from the NNE (Rauristal) and SW (Fleisstal-Molltal).
 - The thermometer is in a white-grained double louvered wooden shelter on the north side of the round anemometer tower, 6.7 m. above the ground. In the winter much rough frost (Raureif) forms also on the inside of the thermometer shelter.
 - The ombrometer is in front of the west side of the house, fairly favorably situated, without a Nipher funnel.
 - See the yearly report of the Sonnblickverein from 1892 on, especially Band XXVI/XXVII, 3-12: "Zur Meteorologie des Sonnblicks, von I. Hann."
- 45 Gibraltar. The following has been omitted from the rainfall introduction:
 "Up to 1912 the gage was in a fenced enclosure, with thermograph screen and other instruments, adjoining observatory building, but in 1912 the rain gage was fixed 46 ft. above Mean Sea Level on a sloping roof of a bomb-proof shelter about 105 ft. south of observatory building. The observatory itself is situated in an obsolete bastion of the fortifications on the sea front, southwest side of the Rock and 50 ft. above Mean Sea Level."
- 46 Greenwich Meteorological and Magnetic Observatory. From 1881-1898 inclusive, pressure records are too low, on the average by the following amounts:

| Jan. | Feb. | Mar. | Apr. | May | June | July | Aug. | Sept. | Oct. | Nov. | Dec. | |
|------|------|------|------|------|------|------|------|-------|------|------|------|--|
| .011 | .017 | .011 | .017 | .017 | .011 | .017 | .017 | .011 | .017 | .017 | .017 | |

Norway—general note. Authority, Det Norske Meteorologiske Institutt.

The observation hours were altered with the beginning of the year 1920 from (8^h, 14^h, 20^h) to (8^h, 14^h, 19^h); until 1895 they were referred to local time (for telegraphic stations to Christiania time); later M. E. T. (Mean European Time) meridian 15° E. of Greenwich was used.

- 51 Berlin. The values of temperature from 1804 to 1816 are slightly too low. From 1873 to 1882 they are about 0.2° C. too high, and in 1886 about 0.2° C. too low.
- 52 Berlin. Height of the thermometers: am Schluss hinter 27.5 m. einzufügen (thermometer in shelter).
- 52 Frankfurt a. Main. Height of the thermometers: From February 1, 1899, to December, 1913, it was 2 m., from January 1, 1914, to December, 1920, it was 27 m.
- 53 Potsdam, insert:—Pressure: the values 1893-1900 are 0.5 mm. too low (not corrected to gravity at 45° Lat.).
- 54 Hvar (Lesina), Jugoslavia. The station is located on a bay on an island of the same name, on a gentle slope directed toward the SSW. Toward the sea are some-low-lying islands. Toward the interior the island rises to an elevation of about 300 m. The height of the barometer above sea level was 20 m.
 - The psychrometer in 1908 was on the NE side of the observer's house in a sheet-metal screen placed about 4 m. above the ground. When the screen was heated by the sun's rays, a reserve thermometer on the NW wall was read. The earlier exposure is not known.
 - The ombrometer in 1908 was favorably located in a terraced garden of the observers.
- 56 Norway, insert:—Kristiania is now Oslo. Bodo should be Bodö, Gjesvar should be Gjesvaer.
- 59 Antananarivo, Madagascar. The H_b value of 1402 m. previously quoted must be corrected to 1375 m. after a precise levelling by "Service Geographique de Madagascar."
- 64 Tanana. "The record at Tanana for the period 1909 to 1920 has been reduced to 220 ft., the present elevation, by the application of a uniform instrumental correction for the barometer in use throughout the period, and a removal correction when necessary.
 - "This office has made no attempt to make the record more homogeneous by reduction of all observations to the mean of 24 hours, or to a mean for the combination of hours." (U. S. Weather Bureau.)
- 68 United States—general note. Authority, United States Department of Agriculture, Weather Bureau. The previously printed temperature means for stations in the United States (excepting Modena, Utah) are values reduced to the mean of 24 hours and not those derived merely by the use of the formula ½ (daily Max. + daily Min.).
- 76 New York. Height of thermometer: 1899-1910, 313 ft. should be 1899, 313 ft.; 1900-1910, 108 ft.
- 84 Bermuda. Under heading "Notes" delete "accepted as equivalent to $\frac{1}{2}(9+15)$ and no" and substitute: "... of observations bear the statement 'Gravity.'"
- 85 Bermuda. Temperature Authorities; insert:—"1866-1886. As for pressure."
- 85 Bermuda. Rainfall Authorities; insert: -- "1866-1886. As for pressure."

- 109 Argentina. The mean temperatures, as in the case of the mean pressures, when not the average of 24 hourly values, are the means of observations made at 7^h, 14^h, and 21^h or 8^h, 14^h and 20^h corrected to the mean of 24 hours. In no case have the means of the daily maxima and minima corrected to the mean of 24 hours been employed as stated in the Notes.
- 109 Ajo-General Lavalle. Rainfall; the observations were taken at the "Estancia Los Yngleses" situated in the proximity of the north promontory of Cape San Antonio, some six miles from the seaboard of the Atlantic Ocean and also on the fringe of the bay of Samborombon. A "Weather Journal" consisting of readings of a barometer, thermometer, hygrometer, and also non-instrumental phenomena (winds, etc.) dates back to 1838. In 1857 there was added a 6-inch float rain gage with a measure graduated to hundredths of an inch. In 1884 this was exchanged for an 8-inch Negretti & Zambra gage with which the earlier one was tested and found true. The rim of the rain gage is 9 m. (not 15) above sea level and 1.2 m. (4 ft.) above ground. The record throughout has been kept by the Gibson family, who acquired the property in 1825.
- 110 Brazil. Mr. R. C. Mossman writes that "much of the Brazilian data which figure under his name were sent to him at different dates between the years 1911 and 1925 by Dr. Morize or his successor, Dr. Sampaio Ferraz."
- 111 Curitiba-precipitation. See Notes, 1921-1930 edition.
- 111 Quixeramobim—pressure. See Notes, 1921-1930 edition.
- 112 Quixeramobim—precipitation. From January 1910 to June 1912, inclusive, the height of the rim of the rain gage above the ground was 2.0 m.

 This was changed to 1.5 m. in July 1912, which height has been maintained to the present date.
- 114 Rio de Jainero. Rainfall. Authority and Sites: Last two lines should read: "1922 to April 1923 are the same as the mean of 9 surrounding stations."
- 117 Año Nuevo. Add Argentina.
- 120 St. Helena. Under Changes of Site, after "1905 ft.," the sentence should continue: "giving the height from November 21, 1910, to December, 1920, as 1980 feet." The sentence "A re-survey 100 ft. too low" should be deleted and replaced by: "A comparison with some earlier observations at a low-level station suggests that this determination is about 50 feet too low."
- 121 South Orkneys. Laurie Island. Site; previous to February 19, 1906, the barometer was at a slightly lower elevation, but the data for the whole period are referred to the height of 7 m.
 - Hours; prefix the word "eye" before "observations."
- 123 Auckland. Temperature. Add the following note: "It seems probable that prior to May 1868 the thermometers were not exposed in a proper screen. The observations are not reliable. The screen used subsequently until 1909 was apparently not a good one, probably

too massive. Monthly means are probably fairly satisfactory, but the range was too great.

Site: The fourth line in this paragraph should read: "was removed to a height of 256 ft. In 1883 the instruments." Last line should read "and at 160 ft. above Mean Sea Level."

150 Durban. Pressure values require the following correction:

| Period | Correction |
|-------------------------------|---------------|
| January 1884 to December 1910 | 0.036 |
| January 1912 to May 1912 | + 0.007 |
| June 1912 to December 1916 | + 0.048 |
| January 1917 to December 1920 | - 0.034 |

225 Allahabad. Owing to the change in the instruments and corrections of the barometers in use at this station, the following correction is required:

| Period | Correction |
|--|---------------|
| From March 10, 1918 to August 18, 1925 | — .013 |
| From August 19, 1925 to October 31, 1929 | +.007 |

352-410 The temperature data for 1916-1920, relating to stations Dudinka, Irkutsk, Kirensk, Minusinsk, Nerchinsky Zavod, Olekminsk, Tchita, and Yakutsk, have not been reduced to real diurnal mean values. The following corrections should be inserted for this reduction:

| Jan. | Feb. | Mar. | Apr. | May | June | July | Aug. | Sept. | Oct. | Nov. | Dec. |
|----------------|------|-------|------|------|------|-------|------|-------|------|------|------|
| Dudinka 0.0 | 0.1 | 0.2 | 0.3 | -0.4 | 0.4 | 0.8 | -0.2 | 0.1 | 0.1 | 0.0 | 0.0 |
| Irkutsk 0.3 | 0.2 | - 0.1 | 0.8 | 0.6 | 0.7 | 0.5 | 0.8 | 0.2 | 0.1 | 0.2 | 0.8 |
| Kirensk 0.2 | 0.1 | 0.1 | 0.4 | 0.5 | 0.6 | - 0.5 | 0.8 | -0.1 | 0.0 | 0.2 | 0.2 |
| Minusinsk0.8 | 0.2 | 0.1 | 0.4 | 0.6 | 0.7 | 0.6 | 0.4 | 0.2 | 0.1 | 0.2 | 0.2 |
| Nerch. Zav 0.3 | 0.0 | 0.0 | 0.8 | 0.4 | 0.5 | 0.4 | 0.2 | 0.0 | 0.0 | -0.2 | 0.8 |
| Olekminsk0.2 | 0.1 | -0.2 | 0.4 | 0.5 | 0.6 | 0.4 | 0.3 | 0.1 | 0.0 | 0.2 | 0.2 |
| Tchita 0.8 | 0.0 | 0.0 | 0.3 | 0.4 | 0.6 | 0.5 | 0.2 | 0.1 | 0.0 | 0.2 | 0.3 |
| Yakutsk0.2 | 0.1 | 0.2 | 0.4 | 0.4 | 0.5 | 0.4 | -0.3 | 0.1 | 0.0 | 0.1 | 0.2 |

In applying the corrections relating to this table in respect to Dudinka the temperature for April 1917 should be taken without correction = -15.6° (with correction = -15.9°), and for July 1918 = 15.6° (with correction = 15.3°); in respect to Minusinsk—for June 1916 without correction = 17.3° (with correction = 16.6°).

In the headings of the tables containing data of air temperature for the stations of the Asiatic part of the U.S.S.R. there is an indication: "Means (hours not given)," which must everywhere be replaced by the following: "Means of $\frac{1}{2}(7^h + 13^h + 21^h)$ corrected to mean of 24 hours."

356-401 As the corrections for the reducing of temperatures to the true means of 24 hours given in this volume have been made more exact, some additional corrections for the values of temperatures should be introduced for the following stations:

| Place | Period | Jan. | Feb. | Mar. | Apr. | May | June | July | Aug. | Sept. | Oct. | Nov. | Dec. |
|---------------|--------------|------|------|------|------|-----|-------|------|------|-------|------|------|------|
| Barnaul | 1881 to 1915 | 0.0 | 0.1 | 0.2 | 0.1 | 0.1 | 0.2 | 01 | 0.1 | 0.1 | 0,1 | 0.1 | 0.1 |
| Berezov | 1881 to 1915 | 0.0 | 0.0 | 0.2 | 0.3 | 0.2 | 0.0 | 0.1 | 0.1 | 0.2 | 0.0 | 0.1 | 0.0 |
| Petropavlovsk | | | | | | | | | | | | | |
| (Lighthouse) | 1890 to 1915 | 0.0 | 0.0 | 0.1 | 0.0 | 0.2 | 0.0 | 0.1 | 0,0 | 0.1 | 0.1 | 0.1 | 0.0 |
| Surgut | 1884 to 1915 | 0.2 | 0.2 | 0.2 | 02 | 0.3 | 0.1 - | -01 | 0.1 | 0.0 | 0.1 | 0.1 | 0.2 |
| Tobolsk | 1884 to 1915 | 0.2 | 0.2 | 0.1 | 0.4 | 0.3 | 0.4 | 0.3 | 0.2 | 0.1 | 0.1 | 0.1 | 0.1 |

- 968 Bermuda. Up to May 1908 the observations for Bermuda appear to have been made at Hamilton, according to statements furnished us by an official observer, and are not considered accurate. After May 1908, observations were made at Prospect until March 1930, and thereafter at St. George.
- to 1920, as the values published contained small errors in most of the years owing to the circumstance that in the years 1912, 1913, 1914, and 1916 to 1921, the means given are those of the hours \(\frac{1}{4}(7^h + 14^h + 21^h + 21^h)\). Hourly means are given in publications Nos. 5, 7, 11, 17, and 30 of the "Instituto Meteorológico de Chile," being the values for the years 1911 to 1915; the corrections given below to reduce the mean of \(\frac{1}{4}(7^h + 14^h + 21^h + 21^h)\) of subsequent years were derived not from the hourly data inter se but from a comparison of these data with the means which appear in publication No. 21 derived from direct observations in another screen. In this way was assured the homogeneity of the data from January 1916 on, with the hourly means from June 1895 to December 1915. See notes on Chile, p. 63.

NOTES AND EXPLANATIONS

Throughout the notes and tables, the following abbreviations have been used:

ft. = foot, feet.

h = hour of observation, as 8h, 14h.

H = height of ground above Mean Sea Level.

H_b = height of barometer above sea level.

hr = height of rain gage above ground.

h_t = height of thermometer above ground.

in. = inch, inches.

Lat. = latitude.

Long. = longitude.

= minute.

m = meter.

mm. = millimeter.

| S | THE HEIGHT OF THE | - Dai Ollicici abovi | , macan i | Jua Lichel Masi. |

1869 to 190333 m.

All values have been reduced to a height of 33 m.

Instruments: The following barometers were in use:

1869 to 1899. Fastré Fortin 1. Index error cor-

rection applied+o.1 mm.

1900 January to April. Fuess Syphon 430. In-

dex error correction applied..... o.o mm.

1900 May to September. Fastré Fortin 2. In-

dex error correction applied.....+1.0 mm.

1900 October to 1903. Fuess Syphon 461. In-

dex error correction applied.....+0.3 mm.

1904 to 1905 February. All readings rejected.

1905 March to 1912 May. Hicks Fortin 1325.

Index error correction applied.....+0.16 mm.

1912 June and July. Fuess Portable 1646. Index

error correction applied.....-o.25 mm.

1912 July to 1921. Fuess Portable 1723. Index error correction applied.....+0.62 mm.

1922 January to December. Fuess Portable 1648.

Index error correction applied.....+0.15 mm.

Hours: The hours of observation are as follows:

1869 to 1899. From readings every three hours.

1900 to 1903. From hourly readings of a barograph.

1905 to 1922. The means of observations at 8h, 14h, and 20h, corrected to reduce them to true means of 24 hours by a correction of +0.04 min.

Notes: All values have been corrected to normal gravity (Lat. 45°).

The values for 1900 are stated to be unreliable.

TEMPERATURE.

Exposure:

The thermometers had at least two different exposures prior to 1900, when a screen of the present Egyptian pattern was installed, being first placed on a north verandah and later in a Renou pattern screen inside a louvred shed. The thermometers were moved from the verandah to the garden in 1890, and it seems probable that another change of exposure took place about the beginning of 1897, and that the mean temperatures for 1897, 1898, and 1899 are too low. Even since 1900 the exposure cannot be considered to have been quite uniform, as latterly the screen became rather sheltered by trees.

Hours:

1869 to 1899. From readings every three hours.

1900 to 1903. From hourly readings.

1904 to 1922. The values are from the dry bulb observations at 8h, 14h, and 20h, and the minimum thermometer readings, calculated according to the following formula:

$$\frac{1}{4}(8^h+14^h+20^h+Min.)$$

and reduced to the true means of 24 hours by applying the following corrections:

Apr. May June July Aug. Sept. Oct. Mar. Nov. Dec. +0.6 +1.0 +0.8+0.8+0.5+0.5 °C. +1.1 +1.0+0.8PRECIPITATION.

The height of the rim of the rain gage above the ground was 1.0 m.

ACCRA, GOLD COAST

Lat. 5° 12' N. Long. 0° 12' W.

TEMPERATURE.

Authorities: 1888 January to 1892 December. Meteorological observations taken at Accra, 1891-92, computed and published by the Medical Officer.

1893 October to 1920 December. Manuscript returns communicated by the Director of the Medical and Sanitary Service and filed in the Meteorological Office, London.

From 1893 October to 1912 June the returns give daily observations; from 1912 July to 1920 December, monthly summaries only are available.

Site: There is no information as to the site. The height above Mean Sea Level was 82 ft. in 1921.

Observations: The standard adopted is the mean of the mean daily maximum and mean daily minimum. These figures were frequently unreliable or wanting and the values in italics have been computed from the observations of the dry bulb at 9^h and 17^h by means of the following correction, obtained from a number of the most reliable records.

Jan. Feb. Mar. Apr. May June July Aug. Sept. Oct. Nov. Dec. $\frac{1}{2}(9^h + 17^h)$ *F. -2.1 -2.0 -2.2 -2.5 -2.7 -2.6 -2.2 -1.8 -1.8 -2.1 -2.3 -2.3

PRECIPITATION.

Authorities: As for Temperature, but some reference has been made to the Gold Coast Blue Book.

Notes: * The value for October 1909 given on the MS. return is 0.00 in., but the printed value given in the Gold Coast Blue Book is 0.32 in.

† The value for February 1910 given on the MS. return is 0.00 in., but the printed value given in the Gold Coast Blue Book is 3.10 in. There was no rain during February 1910 at the neighboring station of Aburi, but owing to the local character of the winter rain in the Gold Coast this comparison is not conclusive.

1888-1892. The observations were taken at 17h.

1893-1920. The observations were taken at 9h.

ALEXANDRIA (KÔM EL NADÛRA) EGYPT

AUTHORITY.

Physical Department, Ministry of Public Works, Cairo, Egypt. Pressure.

Site: The height of the barometer above Mean Sea Level was 32 m. throughout the period.

Instruments: The following barometers were in use:

1888 to 1900 April. The barometer and index error correction in use during these years are unknown.

1900 May to 1909 May. Fuess Portable 1439, index error correction applied.....-0.20 mm.

1909 June to 1915 July. Fuess Portable 1439, index error correction applied.....-0.13 mm.

1915 August to 1918 April. Fuess Portable
1439, index error correction applied..+0.06 mm.

1918 May to 1922. Fuess Portable 1439, index error correction applied.....-0.10 mm.

Hours: The hours of observation are as follows:

1888 to 1900. From readings every three hours.

1901 to 1922. The means of observations at 8h, 14h, and 20h, corrected to reduce them to true means.

Notes: All values have been corrected to normal gravity (Lat. 45°) by applying a correction of -0.97 mm.

TEMPERATURE.

Hours: 1870 to 1888. From observations made by Pirona at 9^h and 21^h.

The means represented by the formula $\frac{1}{4}(9^h+21^h+Max.+Min.)$ are corrected to reduce them to Kôm el Nadûra true means, by corrections derived from comparison of the observations made at the two stations during the eight years 1889 to 1896.

1889 to 1896. The values given are the means between Pirona's corrected results (see 1870 to 1888) and those of Kôm el Nadûra.

The two series are in good agreement, the average difference between monthly means without regard to sign being only 0.12° C.

1897 to 1900. The values given are means of observations taken every three hours at Kôm el Nadûra.

1901 to 1922. The values given are the means of the dry bulb observations at 8h, 14h, and 20h, and the

minimum thermometer readings, calculated according to the following formula:

$$\frac{1}{4}(8^h + 14^h + 20^h + Min.)$$

and reduced to true means by a correction derived from five years' thermograph charts.

Notes: There does not seem any reason to fear any serious discontinuity except possibly at about 1901, when a screen of the Egyptian pattern was installed. No record of the form of screen employed at Kôm el Nadûra before that date can be traced, nor is the date when the screen was changed known for certain. It was, however, between 1901 and 1905.

PRECIPITATION.

The height of the rim of the rain gage above the ground is 2.0 m.

The observations of Kôm el Nadûra only have been included.

ALIWAL (NORTH), SOUTH AFRICA

AUTHORITY.

Meteorological Office, Department of Irrigation, Pretoria, Union of South Africa.

Pressure.

Site: The height of the barometer cistern above Mean Sea Level was 4352 ft. throughout the period (1892 to 1918).

Hours: The hour of observation was $6\frac{1}{2}^h$ Greenwich Mean Time throughout the period.

Notes: All values have been corrected to normal gravity (Lat. 45°) by applying a correction of -.039 in.

TEMPERATURE.

Site: As for Pressure.

Mean: The standard adopted is the mean between the mean daily maximum and the mean daily minimum.

BULAWAYO, RHODESIA

Authority.

The Hydrographic Engineer, Department of Agriculture, Salisbury, Rhodesia.

PRESSURE.

Site: 1897 to 1901 August. Observations taken by the Rev. Father Nicot at St. George's School, at the same height as the present site (4440 ft.).

1901 September to December. Observations taken at the Railway Station at a height of 4469 ft.

1902 January to 1903 May. Observations at St. George's School.

1903 June to 1923. Observations by the Rev. Father Goetz at the Observatory at a height of 4440 ft.

For the notes on the height of the station, see Introduction to Salisbury, Rhodesia. It is probable that the height of Bulawayo, like that of Salisbury, needs a correction of between -30 and -60 ft., but this has not yet been determined.

The values of 1901 September to December have been reduced to a height of 4440 ft. by applying a correction of +0.026 in.

Instrument: A Kew pattern barometer, index error correction +0.014 in. has been in use throughout the period.

Hours:

1897 to 1903. 9h (30th Meridian time).

1904 to 1923. 8h (30th Meridian time).

The values for 1904 to 1923 have been corrected to 9h, by applying the following corrections:

Jan. Feb. Mar. Apr. May June July Aug. Sept. Oct. Nov. Dec. Inches .000 +.003 +.004 +.005 +.007 +.015 +.018 +.014 +.007 +.004 +.003 .000

Notes: All values have been corrected to normal gravity (Lat. 45°) by applying a correction of -0.053 in.

Prior to January 1904, the pressure data may be unreliable.

A correction of -.100 in., obtained by comparison with the Salisbury readings, has been applied to 1897 November and December; 1898 January; 1890 May and June.

TEMPERATURE.

Site: As for Pressure.

Exposure: Prior to January 1904 the thermometers were exposed in a small-sized Stevenson screen. Since that

date they have been exposed in a large-sized Stevenson screen together with autographic instruments.

Hours: The standard adopted is the mean between the mean daily maximum and mean daily minimum.

CALABAR, SOUTHERN NIGERIA

Lat. 4° 58' N. Long. 8° 19' E.

PRECIPITATION.

Authorities:

- 1895 April to 1896 March. Meteor. Zeitschrift, 20, 1903,
- 1898 February to 1901 June. Manuscript returns communicated by the Medical Officer and filed in the Meteorological Office, London.
- 1901 August to 1905 December. Data extracted by Mr. C. E. P. Brooks for "The Rainfall of Nigeria and the Gold Coast," London Q. J. R. Meteor. Soc., 42, 1916, p. 85. These data were in many cases supplied in manuscript by the Medical Officer.

1006-1010. Nigeria Government Gazettes.

1911-1913. Southern Nigeria Blue Books.

1014-1020. Nigeria Blue Books.

Site: The height of the site above Mean Sea Level is unknown, but from some barometric observations it is estimated as 40 ft.

CAPE SPARTEL, TANGIERS

Lat. 35° 47' N. Long. 5° 55' W.

PRESSURE.

Authorities: 1893 to 1920. Manuscript returns supplied by Mr. Edwin C. Hathaway and filed in the Meteorological Office, London.

Site: The height of the barometer above Mean Sea Level was: 1894 to July 1914...... 197 ft. 1916 January to 1920...... 197 ft.

All values have been reduced to Mean Sea Level by a height correction based on the dry-bulb temperature; this correction is as follows:

1894 to July 1914......about..+.215 in. 1914 September to 1915 December.....about..+.252 in.

1916 January to 1920......about..+.215 in.

In August 1914 the station was attacked by natives and the Signal Station was temporarily closed, but the instruments were transferred to the neighboring lighthouse and observations were recommenced under Mr. Hathaway's supervision. The old site was re-established in January 1916.

Instrument: Barometer no. 653 B. T. Adie, index error correction .000 in., in use throughout.

Hours:

Notes: All values are corrected to normal gravity (Lat. 45°) by applying a correction of -.024 or -.025 in. according to the barometer reading.

TEMPERATURE.

Authorities: As for Pressure.

Site: As for Pressure.

Observations: The standard adopted is the mean of the mean daily maximum, mean daily minimum, mean of the dry bulb readings at 9^h and at 21^h. In some months the maximum or minimum readings were unreliable or wanting, and the values in italic have been computed by applying corrections (Table B) based on the long series of reliable records.

* Indicates a value corrected from $\frac{1}{2}(9+21)$. † Indicates a value corrected from $\frac{1}{2}(9+15)$.

PRECIPITATION.

Authorities: 1895 October to 1902 December. Hamburg, Deutsch Übersee. Meteor. Beobachtungen, Heft 11-14.

1903 January to 1911 December. Heidke, P., Meteor. Beobachtungen aus Deutsch-Ostafrika, Teil 3-8, repr. from Mitt. d. D. Schutzgebieten, vol. 21-26.

Site: 1895 October to 1898 December. In a house on the large harbor. On December 31, 1898 the barometer was moved to a new site 130 m. from the shore at the same level. The height was determined as 7.6 m. from the records of a self-registering Seibt-Fuess level in 1902. The height is 9.62 m. above Dar-es-Salaam zero, which lies 1.97 m. below Dar-es-Salaam mean water.

Changes of Instrument: From December 1895 to December 1900 a Bonesch barograph was in use, and a Fuess barograph subsequently. The barograms are controlled by eye readings of a mercury barometer at 7^h, 14^h,

and 21^h (Hechelmann station barometer, correction +0.3 mm. until December 31, 1909. Fuess station barometer, correction +0.1 mm.)

Hours: Mean of 24 hours throughout.

TEMPERATURE.

Authorities: As for Pressure.

Site: As for Pressure.

Instrument: A Fuess thermograph controlled by eye observations was in use throughout.

Hours: Mean of 24 hours throughout.

PRECIPITATION.

Authorities: As for Pressure.

Site: As for Pressure.

DURBAN, SOUTH AFRICA

PRESSURE.

Authorities: 1884 to 1916. Dr. J. R. Sutton, Kenilworth Observatory, Kimberley.

1917 to 1920. Manuscript data supplied by the Meteorological Office, Department of Irrigation, Pretoria, and filed in the Meteorological Office, London.

All values have been corrected to Mean Sea Level.

Hours: The hour of observation is $8\frac{1}{2}$ h, 30th meridian time, throughout the period.

Notes: All values have been corrected to normal gravity (Lat. 45°) by applying a correction of -.039 in.

TEMPERATURE.

Authorities:

1885 to 1916. Dr. J. R. Sutton.

1917 to 1920. Meteorological Office, Department of Irrigation, Pretoria.

Hours: The standard adopted is the mean between the mean daily maximum and the mean daily minimum.

Site: As for Pressure. In order to make the observations at the two sites comparable, the following corrections have been applied to the values from 1912 June to 1920:

Jan. Feb. Mar. Apr. May June July Aug. Sept. Oct. Nov. Dec. *F. +0.6 +0.5 +0.5 +0.5 +0.7 +1.0 +1.1 +1.3 +1.3 +1.1 +1.0 +0.8

Exposure: The thermometers at the Observatory were placed on a trestle, $3\frac{1}{2}$ ft. above the ground, and protected by thin wooden screens from sun and earth radiation.

PRECIPITATION.

Authorities:

1873 to 1912 May. Dr. J. R. Sutton.

1912 June to 1920. Meteorological Office, Department of Irrigation, Pretoria.

Site: From 1873 to 1883, the observations were taken at the Botanic Gardens, and from 1884 to 1912 May at the Observatory, with an over-lapping period of seven months in 1884 of fair agreement, so that the two records may be regarded as a comparable series of 39 years at a height of 262 ft. From 1912 June to 1920, the rain gage was at a height of 50 ft., and no correction has been applied to these figures.

Instrument: An 8-inch gage was in use at the Observatory with the rim 3 ft. 6 in. above the ground.

ENTEBBE, UGANDA

Lat. 0° 5' N. Long. 32° 20' E.

Pressure.

Authorities:

1904 May to 1908 December. Manuscript returns communicated by the Scientific and Forestry Department, and filed in the Meteorological Office, London.

1909 to 1920 Uganda Blue Books.

Changes of Site:

1904 May to 1913 May..... +.020 in. 1904 June +.017 in.

Instrument: Barometer No. 1977, Casella, was in use throughout the period. The index error correction is unknown, but presumed to be applied.

Barometer No. 2025 Negretti and Zambra was in use up to April 1904, but the observations from this instrument have been rejected as inaccurate. Hours: The mean adopted throughout the period is the direct mean of 7h, 14h and 21h.

Notes: All values have been corrected to normal gravity (Lat. 45°) by applying a correction of -.073 in.

MEAN TEMPERATURE.

Authorities: As for Pressure, with the addition of 1901 August to 1903 April. Manuscript returns communicated by the Scientific and Forestry Department, and filed in the Meteorological Office, London.

Site: See note under Pressure.

Observations: The standard adopted is the mean represented by the formula $\frac{1}{7}$ [7^h + 14^h + (2×21^h)].

PRECIPITATION.

Authorities: As for Temperature, with the addition of:

1896 April to 1900 December. Uganda Protectorate Meteorological returns, 1905.

1901 January to 1901 July. Manuscript returns as before.

Site: See note under Pressure.

FREETOWN, SIERRA LEONE

Lat. 8° 29' N. Long. 13° 9' W.

PRESSURE.

Authorities:

1877 March to 1886. Manuscript returns communicated by the Royal Army Medical Corps and filed in the Meteorological Office, London.

1887 to 1888. London, Army Medical Department. Annual abstract of meteorological observations taken at Netley and stations abroad. London, Army Medical Department Reports.

1889 to 1890. No information was available.

1891 to 1895 July. See 1887-1888.

1895 August to 1920. Manuscript returns communicated by the Principal Medical Officer filed in the Meteorological Office, London.

Pressures for the years 1874 October to 1877 February were rejected as unreliable.

Site: The barometer was at a height of 224 ft. above Mean Sea Level throughout the period.

Changes of Instrument:

1877 March to 1886 December. Barometer No. 45 A. M. D. Index error correction +.oog in. applied.

- 1887 to 1888; 1891 to 1895 July. Barometer in use is unknown, but it is assumed that the necessary corrections have been made.
- 1895 August to 1911 December. Barometer No. 3 A. M. D. Index error correction +.004 in. applied.
- 1912 August to 1920 December. Barometer No. M. O. 1233 Kew Pattern. Index error correction -.003 or -.004 in. (according to the reading) applied.

Changes of Hours of Observation:

All values have been corrected to the mean of 24 hours by corrections (Table A) based on observations at Duala and Sansane Mangu.

- Notes: All values have been corrected to normal gravity (Lat. 45°) by applying a correction of -.073 in. or -.074 in. according to the barometer reading.
 - * The value for 15hr. was thought to be doubtful and the pressure was corrected to the mean of 24 hours from the mean at 0h (Table A).
 - † The value for 9^h was thought to be doubtful and the pressure was corrected to the mean of 24 hours from the mean at 15^h by applying a correction of +.046 in.
 - The years 1887 and 1888 are already reduced to Mean Sea Level in the Army Medical Department reports and the values have been reduced to station level by applying the corrections given in Table B.

TEMPERATURE.

Lat. 10° 31' N. Long. 0° 26' W.

PRECIPITATION.

Authorities:

- 1899 to 1920. Manuscript returns communicated by the Director of the Medical and Sanitary Service, and filed in the Meteorological Office, London.
- From 1899 to 1912 June, the returns give daily observations; from 1912 July to 1920 December, monthly summaries only are available.
- Site: There is no information regarding the instrument or its exposure. The site of the station is probably about 350 ft. above Mean Sea Level.

HELWAN, EGYPT

AUTHORITY.

Physical Department, Ministry of Public Works, Cairo, Egypt. Pressure.

- Site: The height of the barometer above Mean Sea Level was 115.6 m. throughout the period.
- Instruments: A barograph was in use throughout the period controlled by the following barometers:
 - 1904 to 1911 August. Fuess Syphon 461 index error correction applied.....-o.1 mm.
 - 1911 August to 1922 July. Fuess Syphon 432 index error correction applied.....+0.2 mm.
 - 1922 July to December. Fuess Syphon 430 index error correction applied...... o.o mm
- Hours: The values are the means of 24 hourly readings from the barograph controlled by eye observations at 8^h, 14^h and 20^h.
- Notes: The readings are at normal gravity (Lat. 45°) and station level, a correction of -1.00 mm. having been applied to the eye observations.

TEMPERATURE.

Exposure: There has been no change of exposure during the series.

Hours:

1904 to 1905. The values are from the dry bulb observations at 8h, 14h and 20h, and the minimum thermometer

readings, the mean being calculated according to the following formula:

$$\frac{1}{4}(8^h+14^h+20^h+Min.)$$

and reduced to the true means of 24 hours by applying the following corrections:

Jan. Feb. Mar. Apr. May June July Aug. Sept. Oct. Nov. Dec. 'C +0.8 +0.9 +0.8 +0.9 +0.8 +0.6 +0.6 +0.5 +0.5 +0.5 +0.6 +0.6 +0.7

1906 to 1920. The values are the means of 24 hourly readings from the thermograph controlled by eye observations at 8h, 14h and 20h.

11921 to 1922. As for 1904 to 1905.

PRECIPITATION.

The height of the rim of the rain gage above the ground was 1.0 m.

Site: The observations were taken at the Observatory; the height of the barometer cistern above Mean Sea Level was 5925 ft. throughout the period (1904 to 1924).

Hours: The hour of observation was 6½ Greenwich Mean Time throughout the period.

Notes: All values have been corrected to normal gravity (Lat. 45°).

TEMPERATURE.

Site: As for Pressure.

Mean: The standard adopted is the mean between the mean daily maximum and mean daily minimum.

PRECIPITATION.

Site: The observations were taken at Joubert Park; the height above Mean Sea Level was 5,750 ft.

KHARTOUM, ANGLO-EGYPTIAN SUDAN

AUTHORITY.

Physical Department, Ministry of Public Works, Cairo, Egypt. Pressure.

Site:

1903 April to 1910 December. At the Military Hospital. 1908 January to 1922 December. At Gordon College.

The values for 1903 April to 1907 December have been reduced to the standard of Gordon College (height of the barometer above Mean Sea Level 300 m.) by the means of the three years in common, 1908 to 1910. For 1908 to 1910 the figures given are the means between Gordon College and the Military Hospital reduced to Gordon College (see 1903 April to 1907).

Instruments: At the Military Hospital:

1903 April to 1904 December. Fuess Portable

1518, index error correction applied.. + 0.30 mm.

1905 January to 1906 June. Fuess Portable 1518,

index error correction applied.....+0.10 mm.

1906 June to 1910 December. Fuess Portable

1518, index error correction applied...+0.37 mm.

At Gordon College.

1908 January to 1909 November. Fuess Portable

1727, index error correction applied...+0.63 mm.

1909 December to 1910 December. Fuess Portable 1630, index error correction

applied+0.40 mm.

1911 January to 1913 December. Fuess Portable

1630, index error correction applied...+0.26 mm.

1914 January to 1922 December. Fuess Portable

1630, index error correction applied...+0.36 mm.

Hours: The values given are the direct means of observations made at 8h, 14h and 20h.

Notes: All values have been corrected to normal gravity (Lat. 45°).

TEMPERATURE.

Site:

1901 to 1910. At the Military Hospital.

1911 to 1922. At the Gordon College.

The values for 1901 to 1907 are corrected to the standard of Gordon College by means of the three years in common 1908 to 1910.

Hours: The values are from dry bulb observations at 8h, 14h and 20h, and the minimum thermometer readings, calculated according to the following formula:

$$\frac{1}{4}(8^h + 14^h + 20^h + Min.)$$

and reduced to the true means of 24 hours by ap-

plying the following corrections based on five years' thermograph records at Gordon College.

Apr. May June July Sept. Oct. Nov. Mar. °C. +1.8 +1.1 +1.2 +1.1 +1.0+1.1 +0.7+0.8+0.9+1.0 +1.2PRECIPITATION.

KIMBERLEY (KENILWORTH), SOUTH AFRICA

AUTHORITY.

Dr. J. R. Sutton, Kenilworth Observatory, Kimberley. Pressure.

Site: The height of the barometer above Mean Sea Level was 3944 ft. throughout the period (1895 to 1923).

Instrument: A Newman standard barometer was in use throughout the period.

Hours: The values are the means of observations at $8\frac{1}{2}^h$, $14\frac{1}{2}^h$ and $20\frac{1}{2}^h$ 30th meridian time.

Notes: All values have been corrected to normal gravity (Lat. 45°) by applying a correction of -.043 in.

TEMPERATURE.

Site: As for Pressure.

Hours: The values given are:

- 1. The means of 24 hourly readings.
- 2. The means between the mean daily maximum and mean daily min.mum.

Exposure: A large louvred screen was in use throughout the period.

PRECIPITATION.

Site: As for Pressure.

Site and Instruments:

- 1. From 1874 to 1896 records were taken at Kimberley by either a Matthews rain gage with a 5-in. diameter or by a Lee rain gage with an 8-in. diameter, at a height of 1 ft. above the ground.
- 2. From 1894 to 1923 observations were taken at Kenilworth with an 8-in. gage at a height of 3 ft. above the ground.

LAGOS, NIGERIA

Lat. 6° 27' N. Long. 3° 24' E.

PRESSURE.

Authorities:

1891 to 1901 May. Manuscript returns communicated by the Chief Medical Officer and filed in the Meteorological Office, London.

1901 June to 1920 December. Nigeria Government Gazettes with the exception of:

1914, November and December; 1915, September to December; 1916, 1917, 1918, 1919 and 1920, January, for which months the data were extracted from the Nigeria Blue Books.

Changes of Site:

1891 to 1896 November. 25 ft.

1896 December to 1920. 22 ft.

Changes of Instrument:

In 1891 January, a Marine Barometer, no. 657, index error correction -.005 in., was in use.

In 1922 January, a Fortin Barometer, no. 2304, Negretti and Zambra, index error correction +.003 in. was in use. The date of change is unknown.

Changes of Hours of Observation:

1891 to 1901 February. 8h, 16h.

1901 March to 1901 September. 9h, 16h.

1903 October to 1920. 9h, 15h.

These hours have been taken as comparable. The hours from 1901 October to 1903 September are unknown, but are probably 9^h and 16^h.

For the months taken from the Nigeria Blue Books (see Authorities) the observations are at 9^h corrected to $\frac{1}{2}(9^h + 15^h)$, by the following corrections:

- A correction, -.076 in., to reduce values to normal gravity at Lat. 45°, has been applied throughout.
- 1891 to 1896 November. A correction of +.003 in. has been applied to reduce values to height of 22 ft.
- 1902 July to 1905 April. For some unknown reason the pressure readings for this period were obviously too high. A correction of -.040 in. has been deduced by comparison with the readings at Sierra Leone and has been applied.
- 1911 January to 1915 May. The data for this period had been corrected to Mean Sea Level and have been brought back to a height of 22 ft. by a correction of -.023 in.

TEMPERATURE.

Authorities:

1891-1900. As for Pressure.

1901-1902. Manuscript data supplied by the Survey Department, Lagos, and filed in the Meteorological Office, London.

1903-1920. As for Pressure.

Site: As for Pressure.

Observations:

The standard adopted is the mean of the mean daily maximum and mean daily minimum. These figures were unreliable or wanting in certain months and the values in italics have been computed from the fixed morning hour of observation by means of the following corrections obtained from a number of the most reliable records:

Site: As for Pressure.

Mean: The standard adopted is the mean between the mean daily maximum and the mean daily minimum.

PRECIPITATION.

Site: As for Pressure.

SALISBURY, RHODESIA

AUTHORITY.

The Hydrographic Engineer, Department of Agriculture, Salisbury, Rhodesia.

Pressure.

Site: 1897 May to 1902 September. Observations taken by the Education Department, about 100 yards distant from present site and at the same height (4860 ft.).

1902 October to 1908, November 7. Observations taken at the Native Hospital (now the Agricultural Department Offices) at same height (4860 ft.).

1908 November 7 to 1921 August. Observations taken at Salisbury Gaol at a height of 4825 ft.

1921 September to 1923. Observations taken at the Meteorological Office (old Native Hospital) at a height of 4860 ft.

The values from 1908 November 7 to 1921 August have been reduced to a height of 4860 ft. by applying a correction of -0.031 in.

The heights given are derived from the Railway Levels. No precise levelling has been carried out in the Colony yet, but the altitudes of certain stations in the primary triangulation of the country were fixed by the Geodetic Survey by means of angular measurements and corrected to height above Mean Sea Level bench marks at Delagoa Bay, Port Natal, Algoa Bay and Cape Town, with a probable error of ±15 ft. According to the Geodetic Survey level, the altitude of Salisbury station as derived from the railway levels is 45 ft. too high. The heights as given are therefore only approximate and may be from 30 to 60 ft. too great.

Instruments:

1897 May to 1900 November 19. Kew Pattern, no. 2006. 1900 November 20. Kew Pattern, no. 2397.

1917 to 1921 August. Fortin Barometer M. O. no. 1331, with index error correction of +0.003 in.

The exact date of the installation of the Fortin barometer M. O. no. 1331 is not known, but it was after 1910 and prior to 1917 and it appears probable that it may have been installed after the break in the records in 1911.

1921 September to 1923. Barometer and correction unknown.

The index error corrections to the two first instruments are not known, as the date at which barometer M. O. 1331 was brought into use is not known exactly, the index correction of +0.003 in. has been applied to the whole series up to 1921 (August).

Hours: The observations were taken at 9^h (30th meridian time) throughout the period.

Notes: All values have been corrected to normal gravity (Lat. 45°) by applying a correction of -0.055 in.

There may be some doubt as to the absolute accuracy of the pressure record during the period in which it was taken at the Gaol.

TEMPERATURE.

Site:

1897 May to 1921 August. As for Pressure.

1921 September to 1923. Observations were continued at the Gaol.

Exposure: Prior to 1911, the thermometers were exposed in a small sized Stevenson screen. After that date they were exposed under a thatched shelter in accordance with former Meteorological Office recommendations for use in the tropics.

Hours: The standard adopted is the mean between mean daily maximum and mean daily minimum.

TUNIS

Lat. 36° 48' N. Long. 10° 10' E.

TABLE A.—Temperature Corrections to Reduce to the Mean of 24 Hours in °C.

Jan. Feb. Mar. Apr. May June July Aug. Sept. Oct. Nov. Dec.

ZANZIBAR, EAST AFRICA

AUTHORITY.

Indian Meteorological Department.

PRESSURE.

The height of the barometer from the beginning of observations to March 1905 was 57 ft.; April 1905, to date, 56 ft. A correction of +.001 was applied to reduce the former period to the present height of 72 ft. The data are the 8h readings.

ASIA

ARABIA

ADEN

Height of barometer from start to date has been 94 ft. From 1880 to 1890 the observations were recorded at 10^h and 16^h; from 1891 to date at 8^h: the former series were reduced to the latter by applying the corrections contained in the India Meteorological Memoirs Vol. XVII, p. XXXI.

MUSCAT

Slight shifts in the position of the thermometers have taken place without corrections being applied to the temperature readings.

CEYLON

GENERAL

Although figures are given to the 3d place of decimals, it is not claimed that they are correct to 0.001 in. They ought in general to be more accurate than 0.01 so that it seems preferable to retain the 3d figure.

NOTES ON INDIVIDUAL STATIONS

COLOMBO

Height of barometer from start to October 1876 was 42 ft.; November 1876 to 1909, 40 ft.; January 1910 to date, 24 ft. The data are the means of 9^h 30^m and 15^h 30^m readings; they were copied from tables received from the Superintendent, Colombo observatory, and are stated to have been reduced to the present height of 24 ft.

From January 1, 1910 the data are from observations recorded at Colombo Observatory at a distance of about three miles from the original site of the observatory at Colombo Fort.

NUWARA ELIYA

Height of barometer from start to August 1873 was 6240 ft.; September 1873 to 1877, 6150 ft.; January 1878 to 1896, 6240 ft.; January 1897 to date, 6188 ft. Corrections of +.045, -.033, +.045 were applied to reduce the three former periods to the present height of 6188 ft. The data have been the means of 9^h 30^m and 15^h 30^m observations. The true altitudes of the points of observations are said by the superintendent, Colombo Observatory, to be uncertain.

TRINCOMALEE

Height of barometer from start to September 1885 was 175 ft.; October 1885 to September 1894, 75 ft.; October 1894 to March 1910, 12 ft.; April 1910 to date, 99 (98.6) ft. The data are the means of 9^h 30^m and 15^h 30^m readings; they were copied from tables received from the Superintendent, Colombo Observatory, and are stated to have been reduced to the present height of 99 ft.

CHINA

HONGKONG

Height of barometer from start to date has been 109 ft. The data are the means of the hourly measures of the barograms, standardized by eye observations of the standard barometers.

ZI-KA-WAI

Details of changes in position of the barometer, thermometers and rain gage are not known.

INDIA

GENERAL REMARKS

Pressure.

The pressure observations in the Indian tables have been corrected to 32° F., to constant of gravity at Lat. 45°, and to the present level of the barometer. The data available for the years previous to 1889 are the means of 10^h and 16^h, local time, observations; but in later years observations have in general been recorded only at 8^h, local time. Corrections taken from Ind. Metl. Memoirs Vol. XVII, have therefore been applied to the earlier data in order to make them comparable with the 8^h data of later years.

Local time is used at all observatories, and the Indian standard time to which the 8^h local time corresponds is given at the top of the respective tables.

TEMPERATURE.

The entries of temperature in the Indian tables are the means of the daily maximum and minimum temperatures.

RAINFALL.

For a few stations rainfall measurements, which were made by the Provincial Governments before the establishment of the Meteorological. Department's observatories, have been included in the tables, the year of change being noted in each case. Dashes in the tables indicate that the data are not available and cannot reasonably be obtained by interpolation from neighboring stations.

NOTES ON DATA FROM INDIVIDUAL STATIONS

AHMADABAD

There was a change in the location of the rain gage and in the control of the rainfall registration in February 1893 but no correction was applied to the older rainfall readings on this account.

AKYAB

Height of barometer from start to date has been 20 ft. From 1875 to 1888 the observations were recorded at 10^h and 16^h, local time; from 1889 to date at 8^h: the former series were reduced to the latter by applying the corrections contained in Ind. Metl. Memoirs Vol. XVII, p. XXVIII.

ALLAHABAD

Height of barometer from start to December 1885 was 307 ft.; January 1886 to date, 309 ft. Data up to 1902 were copied from the Ind. Metl. Memoirs Vol. XVI, where they were corrected to the present height of 309 ft. From 1875 to 1888 the observations were recorded at 10^h and 16^h, local time; from 1889 to date at 8^h: the former series were reduced to the latter by applying the corrections contained in Ind. Metl. Memoirs Vol. XVII, p. XXIX. There was a shift in the position of the thermometer shed in 1886, but no correction has been applied on this account.

BANGALORE

Height of barometer from start to July 1882 was 2982 ft.; August 1882 to December 1892, 2983 ft.; January 1893 to July 1894, 3019 ft.; August 1894 to date, 3021 ft. Data up to 1902 were copied from Ind. Metl. Memoirs Vol. XVI. The observatory was shifted from the old site to the new one on January 1, 1894 and a correction of —.049 determined by over one year's comparative readings at the two sites was applied to the readings to make the two series homogeneous. No correction has been applied for the change of height from 3019 ft. to 3021 ft. which is apparently due to a redetermination of height and not to a shift of barometer. From 1875 to 1888 the observations were recorded at 10h and 16h, local time; from 1889 to date at 8h: the former series were reduced to the latter by applying the corrections contained in Ind. Metl. Memoirs Vol. XVII, p. XXIX. No corrections were applied to the temperature and rainfall readings on account of the shift in the position of the observatory in 1894.

BOMBAY (COLABA)

Height of barometer from start to date was 37 ft. From 1847 to 1874 the data utilised were the means of 24 hourly readings; from 1875 to 1888 the means of 10^h and 16^h, local time, observations; from 1889 to date the 8^h readings. The former two series were reduced to the latter by applying the appropriate corrections derived from pages XXXIII and XXIX of the Ind. Metl. Memoirs Vol. XVII.

CALCUTTA (ALIPORE)

Height of barometer from start to March 1877 was 18 ft.; April 1877 to date, 21 ft. Data up to 1902 were copied from the Ind. Metl.

Memoirs Vol. XVI, where they were reduced to the present height of 21 ft. From 1855 to 1888 the observations were recorded at 10^h and 16^h, local time; from 1889 to date at 8^h: the former series were reduced to the latter by applying the corrections contained in Ind. Metl. Memoirs Vol. XVII, p. XXVIII. There was a change in the location of the rain gage and in the control of the rainfall registration in April 1877, but no correction has been applied to the older rainfall readings.

CHERRAPUNJI

Height of barometer from start to date has been 4309 ft. The data are the means of 8h, local time, readings. There was a change in the location of the rain gage and in the control of the rainfall registration in June 1902 but no correction was applied to the older rainfall readings on this account.

COCHIN

Height of barometer from start to February 1891 was 11 ft.; March 1891 to November 1906, 10 ft.; December 1906 to date, 9 ft. Data up to 1902 were given in the Ind. Metl. Memoirs, Vol. XVI, where they were reduced to the height of 10 ft. A further correction of +.001 has been applied to all the readings up to November 1906 to reduce them to the present height of 9 ft. From 1878 to 1888 the observations were recorded at 10^h and 16^h, local time; from 1889 to date at 8^h: the former series were reduced to the latter by applying the corrections contained in the Ind. Metl. Memoirs Vol. XVII, p. XXIX.

GAUHATI

Height of barometer from start to November 1913 was 181 ft.; from December 1913 to date, 182 ft. The data are the means of 8h, local time, readings. A correction of -.001 was applied from start to November 1913 to reduce the readings to the present height. There was a change in the location of the rain gage and in the control of the rainfall registration in July 1902 but no correction was applied to the older rainfall readings.

HYDERABAD (SIND)

Height of barometer from start to May 1885 was 94 ft.; June 1885 to March 1895, 117 ft.; April 1895 to date, 96 ft. Data up to 1902 were copied from the Ind. Metl. Memoirs Vol. XVI, where they

were corrected to the present height of 96 ft. From 1877 to 1888 the observations were recorded at 10^h and 16^h, local time; from 1889 to date at 8^h: the former series were reduced to the latter by applying the corrections contained in Ind. Metl. Memoirs Vol. XVII, p. XXIX. The observatory was shifted in June 1885, but no correction was applied to the temperature readings on this account.

IAIPUR

Height of barometer from start to date has been 1431 ft. From 1881 to 1888 the observations were recorded at 10^h and 16^h, local time; from 1889 to date at 8^h: the former series were reduced to the latter by applying the corrections contained in Ind. Metl. Memoirs Vol. XVII, p. XXX.

KALAT

There was a change in the location of the rain gage and in the control of the rainfall registration in January 1893 but no correction was applied to the older rainfall readings on this account.

KARACHI

Height of barometer from start to October 1895 was 49 ft.; November 1895 to May 1897, 12 ft.; June 1897 to June 1908, 30 ft.; July 1908 to date, 13 ft. Data up to 1902 were given in the Ind. Metl. Memoirs Vol. XVI, where they were reduced to the height of 30 ft. A further correction of +.017 was applied from start to June 1908 to reduce all the data to the present height of 13 ft. From 1875 to 1888 the observations were recorded at 10^h and 16^h, local time; 1889 to date at 8^h: the former series were reduced to the latter by applying the corrections contained in the Ind. Metl. Memoirs Vol. XVII, p. XXIX. The position of the thermometer shed was changed in November 1895, and was transferred to Manora, near Karachi, from July 1, 1908; but no corrections have been applied to the temperature readings on account of these changes.

KODAIKANAI

Height of barometer from start to date has been 7688 ft. The data are the means of 8h, local time, readings.

LAHORE

Height of barometer from start to December 1884 was 732 ft.; from January 1885 to date, 702 ft. Data up to 1902 were copied from

the Ind. Metl. Memoirs Vol. XVI, where they were reduced to the present height of 702 ft. From 1875 to 1888 the observations were recorded at 10^h and 16^h, local time; from 1889 to date at 8^h: the former series were reduced to the latter by applying the corrections contained in Ind. Metl. Memoirs Vol. XVII, p. XXIX. The observatory was shifted to a distance of about 4 miles from the old site in January 1885. No corrections have been applied to the temperature readings.

LEH

Height of barometer from start to date has been 11,503 ft. From 1875 to July 1894 the observations were recorded at 10^h and 16^h, local time; from August 1894 to date at 8^h: the former series were reduced to the latter by applying the corrections contained in Ind. Metl. Memoirs Vol. XVII, p. XXIX.

MADRAS

Height of barometer from start to date has been 22 ft. The data from 1841 to 1867 were the means of 24 hourly observations; from 1868 to 1888 the observations were recorded at 10^h and 16^h, local time, and from 1889 to date at 8^h: the former two series were reduced to the latter by applying the appropriate corrections derived from pages XXXI and XXXV of the Ind. Metl. Memoirs Vol. XVII.

NAGPUR

Height of barometer from start to December 1905 was 1025 ft.; January 1906 to date, 1017 ft. A correction of +.008 was applied from start to December 1905 to reduce these readings to the present height of 1017 ft. From 1869 to 1888 the observations were recorded at 10^h and 16^h, local time; from 1889 to date at 8^h: the former series were reduced to the latter by applying the corrections contained in Ind. Metl. Memoirs Vol. XVII, p. XXX.

PORT BLAIR

Height of barometer from start to March 1908 was 61 ft.; April 1908 to June 1920, 58 ft.; July 1920 to December 1920, 59 ft. Data up to 1902 were given in the Ind. Metl. Memoirs Vol. XVI, where they were for the height of 61 ft. Corrections of +.002, -.001 were applied to the readings from start to March 1908 and from April 1908 to June 1920 respectively, to reduce them to the present height of 59 ft. The observations from 1871 to 1888 were recorded 10h and

16h, local time; from 1889 to date at 8h: the former series were reduced to the latter by applying the corrections contained in the Ind. Metl. Memoirs Vol. XVII, p. XXXI.

QUETTA

Height of barometer from start to January 1886 was 5489 ft.; February 1886 to date, 5490 ft. Data up to 1902 were copied from the Ind. Metl. Memoirs Vol. XVI, where they were reduced to the present height of 5502 ft. From 1879 to 1888 the observations were recorded at 10^h and 16^h, local time; from 1889 to October 1912 at 8^h; from November 1912 to date at 7^h. The 10^h and 16^h data were reduced to the 8^h equivalent by applying the corrections contained in Ind. Metl. Memoirs Vol. XVII, p. XXIX. No correction has been applied to reduce the 7^h data to the 8^h series.

RANGOON

Height of barometer from start to October 1902 was 41 ft.; November 1902 to January 1906, 57 ft.; February 1906 to February 1909, 36.ft.; March 1909 to date, 18 ft. Data up to 1902 were given in the Ind. Metl. Memoirs Vol. XVI, where they were reduced to the height of 57 ft. Further corrections of +.039 from start to January 1906 and of +.018 from February 1906 to February 1909 were applied to reduce the whole series of data to the present height of 18 ft. From 1876 to 1888 the observations were recorded at 10^h and 16^h, local time; from 1889 to date at 8^h: the former series were reduced to the latter by applying the corrections contained in the Ind. Metl. Memoirs Vol. XVII, p. XXVIII. There were shifts in the position of the thermometer shed in March 1902 and in 1906, but no corrections were applied to the thermometer readings.

SHILLONG

Height of barometer from start to date has been 4920 ft. The data are the means of 8h, local time, readings. There was a change in the location of the rain gage and in the control of the rainfall registration in June 1902 but no correction was applied to the older rainfall readings on this account.

SIMLA

Height of barometer from start to February 1885 was 7012 ft.; March 1885 to February 1889, 7048 ft.; March 1889 to March 1890,

7073 ft.; April 1890 to June 1892, 7274 ft.; July 1892 to November 1908, 7224 ft.; December 1908 to date, 7232 ft. Data up to 1902, reduced to the height of 7224 ft., were published in the Ind. Metl. Memoirs Vol. XVI; to these as well as to the readings from 1903 to November 1908 a further correction of —.008 was applied to reduce them all to the present height of 7232 ft. From 1880 to 1888 the observations were recorded at 10^h and 16^h, local time; from 1889 to date at 8^h: the former series were reduced to the latter by applying the corrections contained in Ind. Metl. Memoirs Vol. XVII, p. XXVIII. There was a shift in the position of the thermometer shed in April 1890; but no correction on this account was applied to the temperature readings. The position of the rain gage has also been shifted several times without any correction being applied on account of change of site.

WALTAIR (VIZAGAPATAM)

Height of barometer from start to January 1899 was 31 ft.; February 1899 to July 1918, 226 ft.; August 1918 to date, 38 ft. Data up to 1902 were given in the Ind. Metl. Memoirs Vol. XVI, where they were reduced to the height of 226 feet by applying a correction of -.200 determined by comparative readings taken at the two sites. A further correction of +.192 due to the second change of site was applied to all these data together with those of the period extending up to July 1918 to reduce the readings to the latest height of 38 ft. From 1875 to 1888 the observations were recorded at 10h and 16h, local time; from 1880 to date at 8h. The former were reduced to the latter by applying the corrections contained in the Ind. Metl. Memoirs Vol. XVII, p. XXX. The observatory was removed from Vizagapatam to Waltair, a distance of about 4 miles, in February 1800 and again from Waltair to Vizagapatam in August 1918. Temperature and rainfall figures up to June 1899 are for Vizagapatam, from July 1800 to August 1918 for Waltair and thereafter again for Vizagapatam. No corrections were applied to these readings on account of these changes.

INDO-CHINA

MONCAY

Height of barometer from start to date has been 9 m. The data are the means of 10^h and 16^h readings.

NHATRANG

Height of barometer from start to date has been 3.6 m. The data are the means of 10^h and 16^h readings.

PHU LIEN

Height of barometer from start to date has been 115.6 m. The data are the means of observations taken at intervals of two hours.

SAIGON

Height of barometer from start to date has been 11 m. The data are the means of 10^h and 16^h readings.

IRAO

BAGHDAD

Height of barometer from start to December 1917 was 127 ft.; January 1918 to October 1918, 120 ft.; November 1918 to date, 125 ft. Corrections of +.002 and -.005 were applied respectively to the data of the former periods to reduce them to the present height of 125 ft. From 1896 to 1905 the observations were recorded at 8h; from 1906 to 1914 they have been 7h readings during the winter months, November to March, and 8h readings during the remaining months. During 1917 the observations were taken at 8h; during January and February 1918 at $6\frac{1}{2}$ h and from March 1918 to date at 7h throughout the year. No correction has been applied to reduce the 7h readings to the 8h equivalents.

BUSRAH

Several changes in the position of the thermometers have taken place without corrections being applied to the temperature readings.

JAPAN

Owing to the destruction of records in the big fire caused by the earthquake of 1923, the data for Japan are not as numerous as they would otherwise be.

PERSIA

BUSHIRE

Height of barometer from start to July 1890 was 25 ft.; August 1890 to October 1890, 29 ft.; November 1890 to date, 14 ft. Data

up to 1902 were copied from the Ind. Metl. Memoirs Vol. XVI, where they were reduced to the present height of 14 ft. From 1878 to 1888 the observations were recorded at 10^h and 16^h; from 1889 to November 1905 at 8^h and from December 1905 to date at 7^h during the winter months, November to March, and at 8^h during the other months. The 10^h and 16^h data were reduced to the 8^h series by applying the corrections contained in the Ind. Metl. Memoirs Vol. XVII, p. XXXI; but no correction was applied to reduce the 7^h readings to the 8^h equivalents.

IASK

Height of barometer from start to date has been 13 ft. The data from start to January 1910 were the means of 8^h observations; from February 1910 to date they have been 7^h readings. No correction was applied to reduce the latter to the former series.

SIBERIA

GENERAL REMARKS

The following is an extract from a letter from the late Director of the Central Physical Observatory, Leningrad, dated June 20, 1925:

We are sorry not to be able to give you the values of pressure for the stations: Vladivostok, Novo-Mariinsky Post, Blagovieshtchensky Priisk, Ust Mayskoye and Turukhansk, the records of same as regards pressure being not trustworthy enough. Up to 1881 homogeneous series of observations in the Asiatic part of the Union are very scarce and beside that in most cases it proved to be almost impossible to establish their complete homogeneity within this period of time. These considerations led us to the decision to give you the data only since 1881.

The data relating to the period 1881-1915 were controlled by means of every method at our disposal; by the method of differences, by the dressing up of mean annual isobars, by the examination of the annual change, by computing the departures from the mean deducted from a long range of years, etc. This work was made in connection with two extensive monographs (which are in preparation) of Prof. A. A. Kaminsky as regards pressure of the air, and of the Senior Physicist Eugenie Rubinstein as regards temperature. In the "Annales de l'Observatoire Physique Central" for 1907 and 1909 indications concerning the determination of absolute heights of the barometers at the meteorological stations in the Russian dominions in Asia were given in a supplement to a previous paper of Prof. Kaminsky treating this subject (Memoirs of the Russian Academy of Sciences, v. XII N. 2). The whole series of observations relating to pressure were effected by means of mercury barometers the correction of which in accordance with the normal barometers of the Central Geophys. Observatory were periodically made at

the stations by the inspectors of the Central Geophys. Observatory. These corrections were applied to the data of Observations.

In the enclosed tables of the data of pressure are reduced to 0 °C, and the Lat. of 45°. Beside that the data of all stations are reduced to the same altitude. The mean diurnal pressure was deducted from observations made three times a day; 7^h a. m., 1^h p. m. and 9^h p. m. according to the formula

$$\frac{7^{\mathsf{h}}+13^{\mathsf{h}}+21^{\mathsf{h}}}{3}$$

The mean diurnal temperature was deducted from observations made at 7^h a. m., 1^h p. m., and 9^h p. m. according to the formula

$$\frac{7^{\mathsf{h}}+13^{\mathsf{h}}+21^{\mathsf{h}}}{3}$$

All the monthly mean values were corrected according to the corrections quoted in the work of H. Wild "Temperatur-Verhältnisse des Russischen Reiches" for the purpose of identifying them with the mean values of hourly observations

$$\frac{(1^a + 2^a + \ldots + 24^h)}{24}.$$

The mean temperatures of all stations are reduced to the same * altitude, the change of temperature with the height being admitted as being equal to - 0.6 °C. for every 100 m.

The data of pressure, temperature, and precipitation relating to the same stations for the period 1916-1920 have not as yet been delivered to the Central Geophys. Observatory.

NOTES ON INDIVIDUAL STATIONS

IRKUTSK

"The height 465.6 m. was adopted only temporarily in 1914 for the time when the barometer was removed for several months (Sept.-Dec.) from its permanent place into a temporary apartment. After its instalment into a new permanent place its height was determined as being equal to 467.0 m. This height has to be considered as the true one since December 17, 1914. Up to 1914 its height was also equal to 467.0. Monthly values from January 1916 to June 1924 have been extracted from data sent from the Central Observatory, Leningrad, to the Simla Metl. Office in June 1925."

SYRIA

BEIRUT

Height of barometer from start to date is said to have varied from 33.7 m. to 40 m. The data were reduced to the station level from the sea level equivalents by applying a uniform correction of -3.0 mm. Temperature data are the means of three daily readings taken at $8\frac{1}{2}$, $14\frac{1}{2}$ and $20\frac{1}{2}$ standard time of 30th E. meridian.

^{*}This is the altitude at the top of the table: it is not the same for all stations. [Editor.]

AUSTRALIA

ADELAIDE. SOUTH AUSTRALIA

AUTHORITY.

Central Bureau of Meteorology, Melbourne, Australia.

Site: During the first year or two, observations were made at
Sir Charles Todd's private residence in Adelaide
and North Adelaide, and for some months in the
Government House grounds, until May, 1860, when
the present observatory building was completed and
the instruments were transferred to their present
site.

PRESSURE.

Site:

1856 to 1860 May. No records are available of the height of the barometer and the corrections applied to reduce the readings to Mean Sea Level.

1860 June to 1924. Height of barometer above Mean Sea Level 140 ft. The values have been corrected to Mean Sea Level.

Hours: The values are the means of observations at 9^h and 15^h.

Notes: All values have been corrected to normal gravity (Lat. 45°).

TEMPERATURE.

Exposure: The thermometers were exposed throughout in a modified improved form of the thermometer stand used at Greenwich, the instruments being about 5 ft. 6 in. from the ground and well protected from the sun and rain and screened from the sky but otherwise fully exposed to currents of air.

Hours: The standard adopted is the mean between the mean daily maximum and the mean daily minimum.

PRECIPITATION.

Site:

1839 to 1860 May. The records were taken at the residence of Sir George Kingston in Grote St.

1860 June to 1924. At the Observatory.

The records at Grote St. were continued until November 1879 so that for over 19 years the two sets of observations were concurrent. During this period the average annual difference between the two gages

was 0.26 in. Moreover the sites were only between 400 and 500 yards apart, so that the two records combined give a continuous and practically uniform register of the Adelaide rainfall from 1839 to the present date.

ALICE SPRINGS, SOUTH AUSTRALIA

AUTHORITY.

Central Bureau of Meteorology, Melbourne, Australia.

PRESSURE.

Site: The height of the barometer above Mean Sea Level was 1926 ft. throughout the period (1885 to 1923).

Instruments:

1885 to 1890 August. A barometer with an index error correction of -.013 in. was in use.

1891 March to 1923. A barometer with an index error correction of +.001 in. was in use.

Hours: The values are the means of observations at 9^h and 15^h, local time.

Note: All values have been corrected to normal gravity (Lat. 45°).

TEMPERATURE.

Mean: The standard adopted is the mean between the mean daily maximum and mean daily minimum.

PRECIPITATION.

Site: As for Pressure.

BRISBANE, QUEENSLAND

AUTHORITY.

Central Bureau of Meteorology, Melbourne, Australia.

PRESSURE.

All values have been corrected to Mean Sea Level.

Hours: The values are the means of observations taken at 9^h and 15^h.

Notes: All values have been corrected to normal gravity (Lat. 45°).

TEMPERATURE.

Mean: The standard adopted is the mean between the mean daily maximum and the mean daily minimum.

PRECIPITATION.

Site: The observations were made at Wickham Terrace throughout the period.

DARWIN, NORTHERN AUSTRALIA

AUTHORITY.

Central Bureau of Meteorology, Melbourne, Australia.

Pressure.

Site: The height of the barometer above Mean Sea Level was 97 ft. throughout the period (1882 to 1924).

Hours: The values are the means of observations at 9^h and 15^h .

Notes: All values have been corrected to normal gravity (Lat. 45°), and to Mean Sea Level.

TEMPERATURE.

Exposure:

1882 to 1894, March 16. The thermometers were exposed in a modified form of the thermometer screen used at Greenwich, and which was similar to that in use at Adelaide (q. v.).

1804 March 17 to 1924. An enlarged Stevenson screen of the pattern now adopted by the Commonwealth Meteorological Bureau was substituted.

Mean: The standard adopted is the mean between the mean daily maximum and the mean daily minimum.

PRECIPITATION.

Site: The observations have been taken in the grounds of the Post and Telegraph Office throughout the period.

DUNEDIN, NEW ZEALAND

AUTHORITY.

Dominion Meteorological Office, Wellington, New Zealand.

Pressure.

Site: The standard barometer is at the Post Office at a height of 40 ft. above Mean Sea Level (1864 to 1923).

Hours: The observations are at 9h throughout the period.

Notes: All values have been corrected to normal gravity (Lat. 45°) by applying a correction of +.003 in., and to Mean Sea Level.

TEMPERATURE.

Site: Dunedin has had rather a checkered career. In the early days it was three miles from the sea, and the height was given as 550 ft. above Mean Sea Level. This was altered to 500 ft. in 1874. In 1892 the Observatory was removed, and the altitude was given as 300 ft., until 1913 when it was again removed, from the Leith Valley to the Caretaker's residence in the Park, two miles from the sea, and the altitude is given as 250 ft. above Mean Sea Level.

Hours: The standard adopted is the mean of the mean daily maximum and mean daily minimum temperatures.

PRECIPITATION.

It was decided that the rainfall records for Dunedin were not sufficiently homogeneous for inclusion.

SYDNEY, NEW SOUTH WALES

AUTHORITY.

Central Bureau of Meteorology, Melbourne, Australia.

PRESSURE.

| Site: The height of the barometer above Mean Sea Level was | : |
|--|----|
| 1859 to 1917, April 14146 ft | |
| 1917 April 15 to 1922, June 19133 ft | ·. |
| 1922 June 20 to 1924138 ft | |
| All values have been reduced to Mean Sea Level | |

Instrument:

1859 to 1909 Newman & Tornaghi barometer.

1910 to 1924 Wild-Fuess barometer.

Hours: The values are hourly means.

Notes: All values have been corrected to normal gravity (Lat. 45°).

TEMPERATURE.

Instruments and Exposure: The thermometers were exposed in a louvred shed with a conical roof until 1909 or 1910 and in a large Stevenson screen since that date.

Mean: The standard adopted is the mean between the mean daily maximum and the mean daily minimum.

PRECIPITATION.

Site: The early rain records were begun at South Head, 5 miles from the city in April, 1840, and continued there

until 1855. Records were taken from 1856 to 1859 at Petersham, and from that year to date at the Observatory site.

Instrument: An 8-inch rain gage has been in use throughout the period.

EUROPE AUSTRIA

WIEN (VIENNA)

SITE.

From January 1851 to August 1852 the observations were made at the University Astronomical Observatory within the city. From September 1852 to April 1872 they were made at the first location of the Central Meteorological Office (Favoritenstrasse 30, H_b=194.2 m.). Since May 1872 they were made at Hohe Warte.

Pressure.

The height of the barometer above sea level was from September 1852 to April 1872, 194.2 m. On the 3d of May 1899 the barometer was removed from the "Parterre" in the first story of the Institute, 207.6 m., to its present level. The entire series of observations are reduced to 202.5 m.

TEMPERATURE.

The values from 1821 to 1850 are taken from: J. von Hann, Meteorologie von Wien, Denkschriften d. Akad d. Wissensch., 73. Band, 1901.

The observations at the sites given above have all been reduced to the present location at Hohe Warte 38.

PRECIPITATION.

The observations from 1851 to 1852 were corrected to those from 1853 to 1872 and these are strictly comparable with the later values after 1872.

BRITISH EMPIRE

ABERDEEN OBSERVATORY

Lat. 57° 10' N. Long. 2° 6' W.

SITE.

The Observatory, which was established in 1868, is on the north side of King's College, in Old Aberdeen. The College lies on a plain gradually rising from the sea from which it is

distant about I mile. There are no serious irregularities of surface in the vicinity excepting the two river valleys of the Don and Dee. To the north, at a distance of about 1 km. the Don flows eastwards to the sea; the Dee flows into the sea at a distance of about 3 km. to the south-east of the College. Between the college and the sea is a golf course covered for the most part with grass. Westwards is the High Street of the Old Town and beyond this there is another street. Further west, grass pasture extends for about one kilometer. Southward are open spaces beyond which the modern town is reached. The enclosure in which the Stevenson screen, the Beckley and check rain gages and the grass minimum thermometer are exposed, lies to the north-east of the Observatory at a distance of about 50 m. The "Northwall" screen in which the recording thermometers are exposed is erected on the wall outside the north window of the uppermost story of the observatory. The nature of the soil and sub-soil is loam and sand.

PRESSURE.

The monthly and annual means of pressure are the means of the values published in the Daily Weather Report and refer to the telegraphic station at Aberdeen. The telegraphic station was in the town of Aberdeen from 1860 until 1888 when the telegraphic work was transferred to the Observatory. The telegraphic readings were made at 8h to June 1908, then at 7h. Corrections have been applied to the earlier figures to reduce them to 7h. The present height of the barometer above mean sea level is 26.8 m. All means refer to 7h and have been reduced to 32° F., Mean Sea Level and corrected for gravity by reduction to Lat. 45°.

TEMPERATURE.

The monthly and annual means of dry bulb temperature are the values published in the Quarterly Weather Report 1871-1880 (inclusive) and in Hourly Readings 1881-1920. They are derived from hourly tabulations of the records of the photographic thermograph which is situated in a north-wall screen on the uppermost story of the Observatory. The height of the thermometer bulb above the ground is 12.5 m.

RAINFALL.

The rainfall totals are taken from the following sources:

1871-1880 Terminal Hour 24h. Hourly Tabulations (manuscript).

1881-1920 Terminal Hour 24h. Hourly Readings.

The totals are derived from the records of a Beckley self-registering rain gage at King's College about 50 m. to the north-east of the Observatory Tower.

The heights of the barometer, thermometer and rain gage are given at the heads of the appropriate tables.

GIBRALTAR

Lat. 36° 6′ N. Long. 5° 21′ W.

Height of Barometer Cistern above Mean Sea Level 53 ft.

Meteorological observations were commenced at Gibraltar in February 1852 under the direction of the Commanding Officer of the Royal Engineers. Observations were taken twice daily, at 9.30 a. m. and 3.30 p. m. Local Time.

On April 1, 1862 the instruments were transferred to the Senior Officer of the Army Medical Department, the hours of observation being altered to 9 a. m. and 3 p. m. Local Time.

At the beginning of July 1908 three observations were taken each day, i. e., at 7 a. m., 1 p. m. and 9 p. m. Greenwich Mean Time.

No observations were published for April 1862 or December 1863 and the original schedules are said to have been destroyed. For 1864-1865 only the printed abstracts in "Meteorological Observations at Foreign and Colonial Stations" (M. O. Official Publication No. 83) exist, the original returns for these years also having been destroyed.

PRESSURE.

- From August-October 1855 the original returns are missing, as is also the return for December 1872.
- Barometer readings from February 1852-June 1855 were taken with Barometer 50 P by Barrow & Co. (Index and Capillary correction +.011 in.), the height of the barometer cistern being 46 ft. above Mean Sea Level.
- After July 19, 1855 readings were taken from the barometer in the Garrison Library "which has no correction, is made by Cox, London and fixed 75 ft. above Mean Sea Level."
- Barometer 50 P by Barrow was repaired and taken into use again on March 10, 1856, the correction for index and capillary action now being +.013 in. while the height above Mean Sea Level remained at 46 ft.
- In January 1861 Barometer 15 made by Barrow was used, this instrument was fixed at a height of 53 ft. above Mean Sea Level its index, etc. correction being +.009 in.

Barometer No. 7 by Negretti & Zambra (index, etc. correction +.018 in.) was used from January 1866 until February 1872 when Barometer A. M. D. No. 26 replaced it.

Fortin Barometer A. M. D. No. 26 fixed at a height of 53 ft. above Mean Sea Level continued to be used for the observations until December 17, 1912, when a Kew Pattern Barometer No. M. O. 1242 was substituted. The correction for index error and capillary action of Bar. A. M. D. No. 26 was stated in 1872 to be -.016 in, and this correction has been applied to all hitherto published values. The station at Gibraltar was inspected in September 1912 by an official of the Meteorological Office London who found that the index etc. correction of Bar. A. M. D. No. 26 was then +.053 in. A comparison of Cape Spartel and Gibraltar pressure data for the period 1895-1920 confirms the inspection report. Moreover, it appears that by 1895 the correction had changed from -.016 in. to +.013 in. Discontinuities appear at the end of 1897 and in November 1898, after which the correction +.053 in. is appropriate. The following adjustments for index error have therefore been used in computing the data:

```
      1866
      -.016 in.

      1867-1894
      Graduated from -.016 in. to +.013 in.

      1895-1897
      +.013 in.

      1898
      Jan.-Oct. +.033; Nov.-Dec. +.053 in.

      1899-Nov. 1912
      +.053 in.
```

All values have been reduced to a common height of 53 ft. by the application of corrections as shown below.

In addition an adjustment has been made to the individual readings for the period February 1852-June 1908 when only two observations were taken each day in order to reduce them to $\frac{1}{3}(7^h+13^h+21^h)$. The corrections were deduced from Lisbon pressure data 1900-1919 given by Lima in "O Clima de Portugal Continental" and are as follows:

The Gibraltar pressure data are therefore monthly and annual means (expressed in inches of mercury) for the period 1852-1920 reduced to 32° F. and Lat. 45°.

Height of Barometer cistern 53 ft. above Mean Sea Level.

Hours of Observation 7^h, 13^h, and 21^h Greenwich Mean Time. These data have been computed directly from the original returns.

RAINFALL.

From August-October 1855 and for December 1872 the original returns are missing.

Data are missing for the period September-November 1878 when the Observatory was under repair.

Up to 1874 readings from a gage exposed 25 ft. above the ground were made in addition to those from the gage on the ground. Data for April, June, September and October 1864 were interpolated using the readings from the 25 ft. gage which during the period 1866-74 gave totals approximately 10 per cent less than the gage on the ground.

Rainfall data shown are monthly and annual totals, in inches, for the period 1852-1920 computed directly from the original returns.

From February 1852-March 1862 gage was read at 9.30 a.m.

From April 1862-June 1908 gage was read at 9 a.m.

After July 1, 1908 readings were made at 7^h Greenwich Mean Time.

TEMPERATURE.

From August-October 1855 the original returns are missing, also for December 1872.

In April, May, June 1853 the maximum thermometer was unserviceable, in January 1857 the minimum thermometer was broken. The minimum thermometer was also out of order in October 1876. Data are missing for September to November 1878 and also for December 1884.

The values shown from February 1852 to December 1903 are deduced from $\frac{1}{2}$ (maximum+minimum), these latter referring to periods of 24 hours ending at the hour of the morning observation. They have been corrected to $\frac{1}{4}(7^h+13^h+2\times21^h)$ by means of correction A, which is based on data for the years 1911 to 1920.

It was found in August 1911 that there was an error of 10° F. in the minimum thermometer owing to the condensation of spirit at the top of the tube. The evaporation of the spirit into the upper part of the tube appeared to have been going on gradually since 1904.

For the period January 1904 to June 1908 values of $\frac{1}{2}(9^h + 15^h)$ reduced to $\frac{1}{4}(7^h + 13^h + 2 \times 21^h)$ by correction B are shown. In July 1908 three observations each day were taken and the values given from July 1908 until December 1920 representing true mean temperatures were obtained by the formula $\frac{1}{4}(7^h + 13^h + (2 \times 21^h))$.

Temperature data shown have been computed directly from the original returns and are monthly and annual means in degrees fahrenheit for the period 1852-1920.

GREENWICH METEOROLOGICAL AND MAGNETIC OBSERVATORY

AUTHORITY.

Meteorological ()ffice, London, England.

SITE.

The Meteorological and Magnetic Observatory is situated in Greenwich Park, about ½ mile (0.8 km.) south of the Thames, on an elevated piece of ground sloping steeply to the north and west and less steeply to the east and commanding extensive views of London, the Thames Valley and the plain of Essex.

Pressure.

The pressure means are taken from "Reduction of Greenwich Meteorological Observations, Parts I and II, 1854-1876" and from "Greenwich Magnetical and Meteorological Observations" Annual Volumes 1877-1920. All means are derived from hourly tabulations of the records of the photographic barograph standardized by eye observations of the standard barometer after correction for temperature but not for gravity or height above sea level. In April 1917 the standard barometer was transferred to the New Magneto-

graph House, the new height being 46.4 m. above sea level. Accordingly, all means published since April 1917 have been decreased by .008 in. to reduce to the former height of 48.5 m. above sea level. All means therefore refer to a height of 48.5 m. above sea level. They have been reduced to 32° F. but the correction for gravity by reduction to latitude 45° has not been applied.

TEMPERATURE.

The monthly means of dry bulb temperature for 1841 to 1905 are taken from "Reduction of Greenwich Observations" Parts III and IV. and for the remaining years, from "Greenwich Magnetic and Meteorological Observations" Annual Volumes. The revolving stand upon which are mounted the dry and wet bulb thermometers employed for standardizing the photographic temperature curves was first erected in March 1841. The observations for previous months were made with a thermometer suspended in a tempora y manner. The monthly means for the period April 1841-December 1847 are means of 12 symmetrically disturbed eye-observations and of 6 eye-observations for 1848. From 1849, the monthly means are means of hourly values derived from records of the photographic thermograph reduced by means of the readings of the revolving stand dry-bulb thermometer. In January 1800 the revolving stand was moved from its position in the Observatory grounds to an open position in the Magnetic Pavilion enclosure. The Magnetic Pavilion is about 320 m. (350 yards) to the east of the Magnetic and Meteorological Observatory. Minor changes in site occurred in 1863 and 1846.

RAINFALL.

The rainfall totals for 1841-1914 are taken from "British Rainfall 1915" Part I, pp. 36-37 and for the remaining years from the Monthly Weather Reports of the British Meteorological Office. Less reliable data for about 26 years earlier than 1841 will also be found in "British Rainfall 1915." The rainfall is measured daily at 9h, 15h and 21h Greenwich Mean Time in an 8" gage whose surface is 5 in. (12.7 cm.) above ground. The continuous record of Osler's self-registering rain gage shows whether the amounts at 9h are to be placed to the same or to the preceding civil day; the amounts thus adjusted refer therefore to the civil day (0h to 24h). At the beginning of 1899, the gage was moved

to the Magnetic Pavilion enclosure. It occupies a position about 366 m. (400 yards) to the east of its former site and about 3.05 m. (10 ft.) north-west of the thermometer stand. The height of the gage was found to be 1.75 m. less than in its old position in the Observatory grounds. Its present height is 45.6 m. (149' 6") above Mean Sea Level. The gages are read at midnight on the last day of each calendar month.

The monthly totals for 1867 and 1868 are those recorded by a monthly 8" gage.

Further details regarding the exposure and site of the barometer, thermometer and rain gage will be found in the annual volumes already referred to.

VALENCIA OBSERVATORY

(Cahirciveen, Co. Kerry, Ireland)

Lat. 51° 56' N. Long. 10° 15' W.

SITE.

Valencia Observatory derives its name from the fact that it was originally established on Valencia Island in 1867. It was removed to the mainland in March 1802, and now lies in a direct line between the old site on Valencia Island and the town of Cahirciveen, about 2½ miles (4 km.) north-east from the former, and three-quarters of a mile (1 km.) southwest of the latter. It is quite remote from any other buildings. The general character of the country surrounding the Observatory is hilly. The eastern bank of the Cahir river is about 150 m. to the westward, and in that direction there is no very high ground between the Observatory and the open sea, some 3½ miles (6 km.) away. To the north-west, however, are hills varying in height from 400 (120 m.) to 900 ft. (275 m.), the highest being less than 3 miles (5 km.) distant. These are only separated by a narrow gully running in a NNW direction from other hills equally high, which stretch away to the northward; the nearest of these is but little more than a mile (11 km.) from the Observatory. Beyond the town of Cahirciveen to the north-east the river opens out considerably, and the country in this direction becomes an open boggy basin, rising by only a gentle gradient. Southward of this, however, it soon rises again, and at about a mile south-east of the Observatory it culminates in a hill

upwards of 1245 ft. (380 m.) in height. Still further south it opens out once more to a distance of nearly 5 miles (8 km.) from the Observatory, where there is a range of hills running east and west, and varying in height from 400 ft. (120 m.) to 1300 ft. (400 m.). To the south-west there is an opening to the sea, between Valencia Island and the mainland; and the circle of hills is completed by those on the island itself, the highest of which is about 800 ft. (240 m.) high, and bears about west-southwest from the Observatory.

Pressure.

The pressure means are the means of the values published in the Daily Weather Report. All means refer to 7^h and have been reduced to mean sea level, 32° F. and Lat. 45°. Up to March 1892 the barometer was at a height of 7 m. above mean sea level, since then it has been at a height of 13.7 m. The telegraphic readings were made at 8^h to June 1908, then at 7^h. Corrections have therefore been applied to the earlier figures to reduce them to 7^h.

TEMPERATURE.

The means of dry bulb temperature are the values published in the Quarterly Weather Report 1869 to 1880 inclusive and in Hourly Readings 1881-1920. They are derived from hourly tabulations of the records of the photographic thermograph. The thermometer bulbs are exposed in a north-wall screen and are 1.3 m. above ground. Prior to the change of site in March 1892, the thermometer bulbs were 3.7 m. above the ground.

RAINFALL.

The rainfall totals are taken from the following sources:

1871-1880 Terminal Hour 24^h. Hourly Tabulations (manuscript).

1881-1920 Terminal Hour 24h. Hourly Readings.

The totals are derived from the records of the Beckley rain gage. The latter instrument was dismantled at the Old Observatory on March 18, 1892, at 2 p. m. and restarted at the new observatory on March 19 at 12.40 p. m. There was no rain during the interval. Rainfall totals for earlier years (1866-1870) are given in the Quarterly Weather Report 1870 Appendix III, p. 11, but as these refer to two different gages on Valencia Island, and in the case of the years 1869 and 1870 to a Glaisher gage on a wall 1.5 m. above the ground, they have not been included in the tables. The heights above ground

and above Mean Sea Level before and after the change are given at the head of the rainfall table.

The Beckley gage and the 8-inch check gage are in a railed off enclosure about 40 m. to the north of the Observatory buildings.

The area of the Beckley gage funnel is 102.3 sq. in. The ground on which the gages stand slopes generally downwards towards the west-northwest at an inclination of about 1 in 20.

The heights of the barometer, thermometers and rain gages are given at the heads of the appropriate tables.

```

The means were reduced to the means of 24 hours by the aid of 25 years of hourly observations at Copenhagen.

The observations at "Rundetaarn" were reduced to the station Botanisk Have by the help of 5½ years of simultaneous observations, and these observations together with those at Botanisk Have were reduced to the station "Landbohøjskolen" by the help of 14½ years of simultaneous observations.

For further information in regard to these reductions see "Meteorologiske Observationer; Kjobenhavn, bearbejdede af v. Willaume-Jantzen, Kjobenhavn, 1896."

PRECIPITATION.

Site:

Sept. 1, 1820 to May 31, 1860—Botanical Garden. June 1, 1860 to Dec. 31, 1920—Agricultural high school.

GERMANY

BERLIN

Pressure.

Hours: From 1881 to 1886 observations were taken at 6^h, 14^h and 22^h and from 1887 to 1920 at 7^h, 14^h and 21^h. The means are obtained from these observations divided by 3.

TEMPERATURE.

Hours: The means were derived from the following combination of hours: from 1769-1786, $\frac{1}{3}(7^h+14\frac{1}{2}^h+22^h)$ in summer and $\frac{1}{3}(8^h+14\frac{1}{2}^h+22^h)$ in winter; from 1787 to 1821, $\frac{1}{3}(8^h+13^h+23^h)$; from 1822 to 1840, $\frac{1}{4}(8^h+14^h+22^h+22^h)$; from 1841 to 1847, $\frac{1}{2}$ (max.+min.) reduced to $\frac{1}{3}$ ($6^h+14^h+22^h$) by means of simultaneous observations: from 1848 to 1886, $\frac{1}{3}(6^h+14^h+22^h)$; from 1887 to 1920, $\frac{1}{4}(7^h+14^h+21^h+21^h)$.

Homogeneity: A detailed study of the homogeneity of the Berlin temperature observations was made by Dr. Hellman and published in "Das Klima von Berlin," Kgl. Preuss. Meteor. Inst., Bd. III, Nr. 6. The mean values from 1787 to 1821 were taken from the original.

Errors: The values from 1805 to 1817 are slightly too low. From 1873 to 1883 they are about 0.02 C. too high and in 1887 about 0.02 C. too low.

Height of the thermometers: After April 1, 1883, $h_t=10.2$ m.; after April 1, 1886, $h_t=13.5$ (thermometer screened); after April 1, 1910, $h_t=2$ m. (thermometer in shelter); after April 1, 1918, $h_t=27.5$ m.

BRESLAU

Pressure.

Hours: Means of pressure, 1881-1886 one third of mean observed values at 6^h, 14^h and 22^h; 1887-1920 one third of mean observed values at 7^h, 14^h and 21^h.

TEMPERATURE.

- Hours: Means of temperature, 1851-1886 one third of mean observed values at 6h, 14h and 22h; 1887-1920 one fourth of observed values at 7h, 14h and twice the values at 21h.
- Exposure of thermometers: The exposure of the thermometers at the astronomical observatory remained unchanged from 1851 to 1920.
- Errors: From 1870 to 1887 the temperature appears to be somewhat too low.

FRANKFURT A. MAIN

PRESSURE.

Hours: The means of pressure from 1881 to 1892 are from observations at 6^h, 14^h and 10^h divided by 3: from 1893 to 1920 from observations at 7^h, 14^h and 21^h divided by 3.

TEMPERATURE.

- Hours: From January 1, 1835 to March 31, 1853 the temperature means were $\frac{1}{4}(9^h+15^h+22^h+minimum)$. From April 1, 1853 to December 31, 1892 they were $\frac{1}{3}(6^h+14^h+22^h)$ and from 1893 to 1920 they were $\frac{1}{4}(7^h+14^h+21^h+21^h)$.
- Height of thermometer: The height of the thermometer above ground from 1835 to December 31, 1887 was 2 m. From January 1, 1888 to January 31, 1899 it was 3 m., and from February 1, 1899 to December 1920 it was 2 m.
- Exposure of thermometers: After January 1, 1888 the thermometer was in a screen. After February 1, 1899 it was in a shelter of the English type.
- Site: On December 1, 1907 the station which had been in the same location since 1835 was removed to a new location in the city.
- Errors: The temperature appears to be about 0.3° C. too high from 1857 to 1861 and from 1899 to 1907.

GÜTERSLOH

TEMPERATURE.

Hours: Means of temperature are: 1835 to 1886 one third of mean observed values at 6^h, 14^h and 22^h; 1887 to 1920 one fourth of the mean observed values at 7^h, 14^h and twice 21^h.

Site: The station was moved in 1853, since then it has been in the same place.

KÖNIGSBERG

Pressure.

Hours: The means are $\frac{1}{3}(7^h+14^h+21^h)$.

TEMPERATURE.

Hours: From 1851 to June 30, 1857 the means are $\frac{1}{3}(6^h+14^h+22^h)$. From July 1, 1857 to 1920 they are $\frac{1}{4}(7^h+14^h+21^h+21^h)$.

Heights: The height of the station, H, was 20 m.; after June 1, 1887 it was 15 m.; and after October 1, 1889 it was 3 m. The height of the thermometers above ground were 1851 to June 30, 1887, $h_t=2.8$ m.; July 1, 1887 to September 30, 1889, $h_t=1.4$ m.; October 1, 1889 to 1900, $h_t=1.5$ m.; 1900 to 1920, $h_t=2.0$ m.

Site: On July 1, 1887 the station was removed from the astronomical observatory to the nearby Botanical Garden and the thermometers exposed in a wild shelter. In October 1889 the station was removed to another site in another part of the lower part of the city and exposed in a shelter of the English type.

Error: From 1851 to 1855 the mean temperatures are about 0.5° C. too high.

GREECE

ATHENS

AUTHORITY.

National Observatory of Athens.

Pressure

The mean pressures are obtained from direct readings of a large Fortin barometer No. 438 (J. Boulan) and from hourly readings of a Richard siphon barograph. The values are only reduced to zero centigrade.

TEMPERATURE.

The means are for 24 hours derived from direct observations at 6^h, 12^h, and 19^h (Greenwich Mean Time) combined with

hourly readings of a Richard Thermograph. No corrections are made except those needed to reduce the thermograph readings to the observed values.

PRECIPITATION.

The monthly and annual totals of precipitation are from a Tonnelot rain gage and a recording Richard pluviometer.

RUMANIA

BUCURESTI (BUCHAREST)

PRESSURE.

For the period 1881 to June 1884 the hours of observation were 7^h, 14^h, and 21^h and for the period of July 1884 to 1925 they were 8^h, 14^h, and 20^h

From 1881-1888 the observations were in Herestrau at the agricultural college; from 1889-1925 they were in Filaret at the Central Meteorological Institute.

The values are not corrected to Lat. 45° because the latitude of Bucharest is 44° 25′ and the correction would be less than 0.05 mm.

TEMPERATURE.

The observations are not homogeneous because the site of the station has been subjected to considerable changes.

- (a) 1857-1862, inclusive, the observations were made by Dr. Barasch at the hours of 6^h, 16^h, and 22^h.
- (b) 1863-1870, inclusive, the station was located at Military Hospital in the street Stirbei-Voda, in the center of the city. During this interval the observations were made by Dr. Lessmann, specialist in mineralogy, and by Dr. Davila, doctor of medicine. The hours of observation were 6^h, 14^h and 22^h.
- (c) 1871-1888, inclusive, the station was located at the college of agriculture at Herestrau in the northern part of the city. The hours of observation were, for the period 1871-1880, 6^h, 14^h and 21^h; for the period 1881 to June 1884, 7^h, 14^h and 21^h, and for the period July 1884 to 1888, 8^h, 14^h, and 20^h.
- (d) 1889-1925, the station was located in the Central Meteorological Institute at Filaret in the central part of the city. The observations were made at 8^h, 14^h and 20^h, local time. Up to 1881 the means of temperature were the means of the three daily observations divided by three.

In order to make the series homogeneous these means have been corrected to the means of 24 hourly observations by applying the following corrections:

| | 1857 | 1868 | 1871 | 1857 | 1868 | 1871 |
|------|------|------|------|----------|------|------|
| | 1862 | 1870 | 1880 | 1862 | 1870 | 1860 |
| Jan. | 0.0 | 0.2 | 0.8 | July 0.6 | 0.5 | 0.2 |
| Feb. | 0.0 | 0.1 | 0.2 | Aug 0.9 | 0.9 | 0.6 |
| Mar. | 0.0 | 0.1 | 0.1 | Sept 0.6 | 0.5 | 0.8 |
| Apr. | 0.4 | 0.4 | 0.1 | Oct 0.3 | 0.1 | 0.2 |
| May | 0.6 | 0.5 | 0.2 | Nov 0.2 | 0.1 | 0.2 |
| June | 0.4 | 0.4 | 0.1 | Dec 0.1 | 0.2 | 0.0 |

After 1881 the daily mean of temperature was calculated according to the formula of Köppen:

$$m=n-k(n-min.)$$

in which m represents the true mean temperature: min. = daily minimum of temperature and k a coefficient of which the value is as follows:

| Jan | May0.209 | Sept0.182 |
|----------|-----------|-----------|
| Feb | June0.215 | Oct |
| Mar0.143 | July0.217 | Nov0.121 |
| Apr | Aug0.200 | Dec |

PRECIPITATION.

The quantity of rain has been measured twice daily, morning and evening at the following sites:

- (a) 1864-1870 at the Military Hospital, Stirbei-Voda.
- (b) 1871-1888 at the college of agriculture, Herestrau.
- (c) 1889-1925 at the Central Meteorological Institute, Filaret.

RUSSIA

AUTHORITY.

Director of the Central Geophysical Observatory, Leningrad.

MATERIAL.

For the time up to 1881 homogeneous observations within the confines of Russia are scarce, and the assurance of similarity of conditions is almost impossible. The data for this reason begin with the year 1881.

The material from 1881 to 1915 is checked by the method of differences, namely, the construction of mean yearly isobars, analysis of the yearly period, the computation of departures from the means of many years. This work is based on the exhaustive monograph of A. Kaminski on the air pressure, on that of Eugenie Rubinstein on air temperature and of E. Berg and A. Tolski on precipitation.

PRESSURE.

All the observations of pressure were made with mercurial barometers which were checked with the standard barometer at the Central Observatory from time to time by inspectors.

The pressure was reduced to 0° C. and to gravity at 45° Lat.

The mean pressures were the means of daily observations at 7^h, 13^h and 21^h divided by three.

TEMPERATURE.

The means of temperature were the means of observations of 7^h, 13^h and 21^h by the formula $\frac{1}{3}(7^h+13^h+21^h)$. These means were reduced to the means of 24 hours by means of corrections obtained from the treatise of Wild on "The Temperature Conditions of the Russian Empire."

The mean temperatures at each station were reduced to a standard level for that station by assuming a decrease of -0.45° C for each 100 m.

The data for 1916 to 1920 are not yet completed.

SWEDEN

HAPARANDA

Hours of Observation.

At Haparanda the observation hours were 8h, 14h and 21h. The temperature means were computed by Ekholm's formula (Nils Ekholm: Calcul de la température moyenne mensuelle d l'air aux stations météorologiques Suédoises, Appendix to the Observations Météorologiques Suédoises, vol. 56, 1914).

Pressure.

The pressure means are the direct mean values of the three observations daily at 8h, 14h and 21h. Since November 1864 the height of the barometer above sea level has been 9.2 m., and the whole of the pressure data is reduced to that height. The earlier height was 16.2 m. For the years 1860-1895 the values of the pressure are taken from the treatise of H. E. Hamberg on "La pression atmospherique moyenne en Suède" (Kungl. Svenska Vetenskapsakademiens handlingar Bd. 31, No. 1). Hamberg's figures were sea-level values and have been reduced back to 9.2 m. level. We have also made a correction for gravity which according to the determination of P. G. Roséns is some 0.05 mm. greater than that used by Hamberg. In other respects the data of H. E. Hamberg is good and correct; although we must consider that of the

earlier years preceding July 1874 as less reliable owing to less frequent checking of instruments and observations.

For the years 1896-1920 the means are taken from our own publication "Meteorologiska iakttagelser i Sverige." These pressure means have been corrected for gravity and such instrumental corrections applied as inspection since their first publication have shown to be needed.

TEMPERATURE.

The heights of the thermometers above the ground at Haparanda have varied somewhat but mostly have remained between 2 and 4 m.

UPSALA

Hours of Observation.

The pressure and temperature means at Upsala since June 1865 have been based on 24 hourly observations.

PRESSURE.

The height of the barometer above sea level has been 24.0 m. since October 1865. Previously it was at a height of 20.8 m. but the means have all been reduced to 24.0 m. During the years 1855-1862 the observation hours were 7^h, 14^h and 21^h. After 1863 they were at 8^h, 14^h and 21^h and the means in both cases were the means of the three observations.

TEMPERATURE.

The temperature means for the years 1855-1862 were computed by the formula $\frac{1}{4}(7^h+14^h+21^h+21^h)$. From January 1863 to May 1865 the observation hours were 8^h , 14^h and 21^h and the temperature means were calculated by Ekholms formula.

The height of the thermometers above the ground has during the entire time remained at about 1.3 m. Since October 1865 the position has not changed.

In the Upsala-Bulletins of 1888 it was noted that the barometer figures of October 1879 to December 1888 were 0.4 mm. too low. This correction has been made. Besides the gravity correction, no other corrections have been made to the values given in the Upsala Bulletins.

SWITZERLAND SÄNTIS

AUTHORITY.

Swiss Meteorological Service.

Site

The meteorological observatory is located on the highest point of the Säntis mountain, 2500.1 m. above sea level. From September 1882 to September 1887 the observations were made at the hotel (Gasthaus) some 40 m. below the summit, height 2465 m. From October 1887 to 1920 they were made at the observatory on the top of the mountain.

Pressure.

All the observations are reduced to the height of 2500.1 m. The correction for gravity (0.16 mm.) is not applied. From 1883 to 1887 the pressures are about 2 mm. too low.

The means throughout refer to 7^h 30^m, 13^h 30^m and 21^h 30^m Central European time. The instrumental errors were determined for the entire period. The heights were measured from the well determined fixed point, Pierre du Niton, at Genf. (Geneva), 373.6 m. above sea-level.

TEMPERATURE.

The exposures of the thermometers from October 1888 to 1893 were not entirely satisfactory.

ZÜRICH

AUTHORITY.

Swiss Meteorological Service.

SITE.

The meteorological station during its entire existence has been in a valley toward the northwest side of Zürichberg at no great height above the level of the lake and the Limmat plain. From 1864 to 1890 the station was at the astronomical observatory of Zürichberg, the height of the thermometers 470 m. From 1891 to 1920 the station was in the Physics Building (near the observatory), the height of the thermometers 477 m.

PRESSURE.

The means have all been reduced to a height of 493.2 m. The pressure is not reduced to Lat. 45°. The correction is 0.08 mm. On January 1, 1890 a new series of observations were begun at the Physics building. The old series (1864-1889) leaves something to be desired in homogeneity.

TEMPERATURE.

From 1864-1873 the thermometers were exposed in a zinc screen on the north side of the tower about 1½ m. above the sod. From 1874-1890 they were in a zinc screen inside of a wooden shelter. From 1891-1895 (September) they were in a wooden screen on the path in front of the Physics building. Since October 1895 they have been in an iron shelter at the same place.

INDIAN OCEAN

AMBOINA, NETHERLANDS EAST INDIES

AUTHORITY.

Koninklijk Magnetisch en Meteorologisch Observatorium, Weltevreden, Java.

PRECIPITATION.

No details are known of this station.

ANTANANARIVO, MADAGASCAR

AUTHORITY.

Observatoire de Tananarive, Madagascar.

PRESSURE.

Site: The height of the barometer above Mean Sea Level was 1402 m. throughout the period (1889 to 1923).

Instrument: A barometer No. 148 by Tonnelot has been in use throughout the period.

Hours: The values are the means of observations taken at 7^h, 9^h, 13^h, 16^h, and 18^h.

Notes: All values have been corrected to normal gravity (Lat. 45°) by applying a correction of -1.5 mm.

TEMPERATURE.

Site: The height of the thermometers above Mean Sea Level was 1402 m. throughout the period.

Hours: The values are the means of direct observations at 7^h, 9^h, 13^h, 16^h and 18^h.

PRECIPITATION.

Site: The site of the rain gage is 1402 m. above Mean Sea Level.

BATAVIA, NETHERLANDS EAST INDIES

AUTHORITY.

Koninklijk Magnetisch en Meteorologisch Observatorium, Welter reden, Java.

Pressure.

Site: The height of the barometer above Mean Sea Level was 8 m. throughout the period (1866-1923).

Instrument: A Fortin barometer, Casella no. 924, is in use. A correction of -0.10 mm. has been applied to the readings by comparison with the standard barometer Adie no. 1410. A comparison with the newly received barometer Fuess no. 303 in 1910 and a comparison made in 1913 and 1914 with Adie

no. 1410, which was returned after repair in 1898, indicates that this correction is probably 0.05 mm. too high, the true correction being -0.05 mm.

Hours: The observations are the mean of 24 hourly readings.

Notes: All values are corrected to normal gravity (Lat. 45°) by applying a correction of -1.93 mm.

TEMPERATURE.

Hours: The standard adopted is the mean of the 24 hourly readings.

NORTH AMERICA

ALASKA

The meteorological observations in Alaska are under the direction of the United States Weather Bureau, and are prepared in accordance with the rules and regulations of that service, except that the hours of observation are not synchronous.

The hours of observation are: Dutch Harbor, 1^h and 13^h, local time; Eagle, 8^h and 18^h, 135th meridian time; Juneau, 8^h and 20^h, 135th meridian time; Kodiak, 2^h and 14^h, 150th meridian time; Nome, 6^h and 18^h, 165th meridian time; Sitka, 8^h and 20^h, 135th meridian time; Tanana and Valdez, 7^h and 19^h, 150th meridian time.

The instruments throughout the series of observations have been near the surface of the ground.

The heights of the thermometers above ground are: Dutch Harbor, 4 ft.; Eagle, 4 ft.; Juneau, 11 ft.; Kodiak, 6 ft.; Nome, 5 ft.; Sitka, 3 ft.; Tanana, 4 ft.; Valdez, 4 ft.

The heights of rain gages are: Dutch Harbor, 3 ft.; Eagle, 3 ft.; Juneau, 4 ft.; Kodiak, 3 ft.; Nome, 6 ft.; Sitka, 2 ft.; Tanana, 3 ft.; Valdez, 6 ft.

CANADA

AUTHORITY.

Canadian Meteorological Service.

Hours of Observation.

Present hours of observation are given under the names of the individual stations. In general these approximate to 8^h and 20^h, 75th meridian time, except at northwestern stations.

METHODS OF OBSERVATION.

No details given.

PRESSURE.

The monthly and annual mean pressures given in the tables are derived from twice daily observations of the barometer corrected for temperature and reduced to gravity at 45° Lat., but not reduced to sea level. The elevation of the barometers above sea level are given in the tables as "H_b."

TEMPERATURE.

The monthly and annual mean temperatures are derived from the mean of the daily maxima plus the mean of the daily minima divided by 2.

The heights of the thermometers above the ground (h_t) are 4 ft. Precipitation.

The total amount of precipitation for each month and the year is given. The amount of rain is measured in a standard gage (size not given) and to this is added the depth of snow divided by 10 as the equivalent of melted snow.

OBSERVATIONS AFTER 1920.

At most of the stations the data after 1920 were copied from the published reports of the Canadian and United States weather services, and are not so carefully checked as preceding data.

NOTES AT STATIONS

BARKERVILLE, BRITISH COLUMBIA

Hours of observation, 5^h and 17^h, 135th meridian time. "No changes in elevation. Gravity correction +.014."

CALGARY, ALBERTA

Hours of observation, 5^h 35^m and 17^h 35^m, 105th meridian time. October 18, 1922 station moved to a height of 3428 ft. A removal correction of +.039 applied to pressure readings. Gravity correction +.009, (index and capillarity, .019), total +.028.

CHARLOTTETOWN, PRINCE EDWARD ISLAND

Hours of observation, 9^h and 21^h, 60th meridian time. A removal correction of +0.026 applied to pressure readings.

DAWSON, YUKON

Hours of observation, 8h and 20h, 135th meridian time.

"Numerous changes have taken place at this station, but all readings at 32° F. have been reduced to standard gravity and to the station elevation of 1052 ft. Gravity correction +.045."

EDMONTON, ALBERTA

Hours of observation, 8^h and 20^h, 135th meridian time. July 20, 1909, station moved but no change in elevation of barometer. Dec. 10, 1913, removal to altitude of 2150 ft. A removal correction of -.010 applied. March 1917, barometer moved back to 2158 ft. Gravity correction +.018 has been applied.

FATHER POINT, QUEBEC

Hours of observation, 8^h and 18^h, 75th meridian time.

"No removals at Father Point. Gravity correction +.010."

KAMLOOPS, BRITISH COLUMBIA

Hours of observation, 4^h 30^m and 16^h 30^m, 120th meridian time. Gravity and removal correction +.08 applied to pressure readings.

MONTREAL, QUEBEC

Hours of observation, 7^h 40^m and 19^h 50^m, 75th meridian time. "No removals at this station. Gravity correction negligible."

MOOSE FACTORY, ONTARIO

Hours of observation, 9^h and 19^h, 80th meridian time. "No changes have taken place at this station."

PRINCE ALBERT, SASKATCHEWAN

Hours of observation, 6h and 18h, 105th meridian time.

"A removal correction of +.020 has been applied. Gravity correction +.019."

OU'APPELLE, SASKATCHEWAN

Hours of observation, 6^h and 18^h, 105th meridian time. Pressure readings corrected for temperature but not for gravity.

SABLE ISLAND

Hours of observation, 8^h and 21^h, 60th meridian time. "No removals at this station."

ST. JOHNS, NEWFOUNDLAND

Hours of observation, 9^h and 21^h, 60th meridian time. Gravity correction +.007. In October 1917 it was discovered that an incorrect

elevation was being used and a new reduction table for 160 ft. was brought into use.

SOUTHWEST POINT, ANTICOSTI

Hours of observation, 8^h 30^m and 20^h 30^m, 60th meridian time. Gravity and index correction +.02 applied to pressure readings.

TORONTO, ONTARIO

Hours of observation, 8h and 20h, 75th meridian time. October 1909 moved to an elevation of 379 ft. All readings have been reduced to an elevation of 350 ft.

VICTORIA, BRITISH COLUMBIA

Hours of observation, 5^h and 17^h, 120th meridian time.

Elevation of station changed from 85 ft. to 228 ft. The pressure readings have all been reduced to the height of 85 ft.

WINNIPEG, MANITOBA

Hours of observation, 7^h and 19^h, 90th meridian time. "No removals at this station. Gravity correction +.010."

Hours of Observation.

From Nov. 1, 1870 to August 24, 1872, Observations were made at 7^h 35^m, 16^h 35^m and 23^h 35^m, Washington time.

From Aug. 25, 1872 to Oct. 31, 1879, Observations were made at 7^h 35^m, 16^h 35^m and 23^h. Washington time.

From Nov. 1, 1879 to Dec. 31, 1884, Observations were made at 7^h, 15^h and 23^h, Washington time.

From Jan. 1, 1885 to Dec. 31, 1886, Observations were made at 7^h, 15^h and 23^h, 75th Meridian time.

From Jan. 1, 1887 to June 30, 1888, Observations were made at 7^h, 15^h and 22^h, 75th Meridian time.

July 1, 1888 to the present time, Observations were made at 8^h and 20^h, 75th Meridian time.

Notes on the Methods of Observation.

(Taken from the Annual Report of the Chief of the Weather Bureau, 1921-1922.)

Pressure: Two mercurial barometers of the well-known Fortin cistern pattern, or a modified form thereof, are furnished each station. One of these, the "station barometer," is used in making all regular observations; the other, the "extra," is held in reserve for use in case of emergency, except that once each month five comparative readings are made on the two instruments for purpose of check upon the deterioration of either instrument.

Each barometer, before issue to station, is compared with the substandard at Washington, and a certificate or correction card furnished showing the several constant corrections that must be applied to the readings of the instrument in order to derive therefrom the actual pressure of the air in standard units at a specified elevation. Each observation as made, therefore, is corrected by the application of the following:

- (1) Correction for scale errors, capillarity, etc.
- (2) Correction to standard gravity, comprising both latitude and altitude terms.
- (3) Correction for removal—a correction applied if any change has been made in the elevation of the barometer, to reduce the readings to the elevation adopted in 1900.
- Corrections 1, 2, and 3 are constant for any one station and are combined in a single sum.
- (4) Correction for the temperature of the scale and mercurial column.

The monthly mean pressures given in the summary are deduced from the corrected observations of pressure at 8h and 20h, 75th meridian time, by taking the mean thereof and applying thereto a correction to reduce to the mean of 24-hourly observations. At several Alaska stations the mean is printed uncorrected.

Temperature: The maximum temperature is obtained by the use of the Negretti and Zambra mercurial thermometer, having a constriction in the bore of the tube below the scale. The minimum temperature is obtained by the use of the ordinary Rutherford alcohol minimum thermometer. Both instruments are read and the values recorded

twice daily, at 8^h and 20^h, 75th meridian time, and are set twice daily at 8^h and 20^h. The extremes given in the summaries are for the civil day, midnight to midnight, normal * standard time. The monthly means have been obtained by dividing the sum of the mean maximum and mean minimum temperature by 2.

Precipitation: The rain gages used at the regular Weather Bureau stations have a circular catchment area of about 8 inches diameter, and the snow, hail, or sleet caught within them is melted and measured as water. The rain gage proper is set within an inclosing cylinder 8 in. in diameter and 2 ft. high, which serves as an overflow attachment in the case of heavy rains and as a snow gage in the winter season.

The sum total of the depth of rain and melted snow is measured to within 0.01 in. at 8h and 20h, 75th meridian time, daily. The total precipitation is determined from the amounts recorded daily, midnight to midnight, standard of time in local use.

The snow caught and retained in the gage is melted and measured as water. No correction is applied for the snow that is lost out of the gage by the eddying action of the wind; consequently in some cases the record is less than would be given if the observer had measured cylinders of snow cut from the spots representing the average snowfall on the ground. When it is known that the catch of the snow gage is markedly deficient, an independent ground measurement is made and used as the official record. The loss of both rain and snow, caused by high winds. from gages located on the roofs of tall buildings in which some of the regular stations of the Weather Bureau are located is undoubtedly larger than is the case at the cooperative stations, where the gages are located in the open country and near the ground, but this loss does not appear to be sufficient to make the monthly and annual sums derived from these two classes of stations wholly inconsistent with each other.

For a detailed account of the method of reducing the observed barometric pressures the reader is referred to the "Report on the barometry of the United States, Canada,

^{*}Standard time of the zone in which the station is located.

and the West Indies," to be found in the Annual Report of the Chief of the Weather Bureau, 1900-1901, volume II.

Thermometers are exposed in standard Weather Bureau shelters.

ABILENE, TEXAS

Weather Bureau observations began Sept. 14, 1885. Removals occurred Aug. 1, 1886, Jan. 1, 1894, and Jan. 8, 1910. The readings of the barometer are all reduced to its level in 1900, 1737.6 ft. above sea level.

Heights of thermometers above ground were: 1885-1886, 42 ft.; 1886-1893, 64 ft.; 1894-1909, 47 ft.; 1910-1923, 10 ft.; and of the rain gage, 1885-1886, 30 ft.; 1887-1893, 53 ft.; 1894-1909, 36 ft; 1910-1923, 3 ft.

ALBANY, NEW YORK

Weather Bureau observations began Dec. 22, 1873. Removals occurred July 1, 1874, Mar. 13, 1880, Oct. 1, 1884, Dec. 12, 1896. The readings of the barometer are all corrected to its level in 1900, 97.0 ft. above sea level.

Heights of thermometers above ground were: 1873, 9 ft.; 1874-1879, 17 ft.; 1880-1884, 51 ft.; 1885-1901, 84 ft.; 1902-1923, 102 ft.; and heights of rain gage, 1873-1879, 1 ft.; 1880-1883, 70 ft.; 1884-1901, 99 ft.; 1902-1923, 100 ft.

BISMARCK, NORTH DAKOTA

Weather Bureau observations began Sept. 15, 1874. Removals occurred July 2, 1877, Dec. 17, 1878, Apr. 1, 1882, Nov. 1, 1886, Oct. 1, 1887, July 1, 1891, June 1, 1894, Oct. 15, 1904, and Nov 7, 1906. The barometer readings are all reduced to its level in 1900, 1673.7 ft. above sea level.

Heights of thermometers above ground were: 1874-1876, 5 ft.; 1877-1878, 31 ft.; 1880-1881, 16 ft.; 1882-1886, 18 ft.; 1887, 39 ft.; 1888-1890, 16 ft.; 1891-1893, 59 ft.; 1894-1906, 16 ft.; 1907-1923, 8 ft.; and of the rain gages, 1874-1876, 1 ft.; 1877-1878, 42 ft.; 1879-1881, 1 ft.; 1882-1886, 31 ft.; 1887-1890, 2 ft.; 1891-1894, 52 ft.; 1895-1923, 3 ft.

CHARLESTON, SOUTH CAROLINA

No details of the earlier observations are available. Weather Bureau observations began Jan. 1, 1871. Removals occurred Feb. 1, 1897.

The readings of the barometer are all reduced to its level in 1900, 48.4 ft. above sea level.

Heights of thermometers above ground were: 1873-1896, 40 ft.; 1897-1910, 14 ft.; 1911-1923, 11 ft.; and of the rain gage, 1873-1896, 56 ft.; 1897-1923, 76 ft.

CHEYENNE, WYOMING

Weather Bureau observations began Nov. 1, 1870. Removals occurred Feb. 21, 1872, June 21, 1874, Dec. 1, 1883, Sept. 28, 1913. The readings of the barometer are all reduced to its level in 1900, 6087.5 ft. above sea level.

Heights of thermometers above ground were: 1874-1883, 15 ft.; 1884-1911, 56 ft.; 1912-1913, 58 ft.; 1914-1923, 84 ft.; and of the rain gage, 1874-1883, 24 ft.; 1884-1911, 49 ft.; 1912-1913, 50 ft.; 1914-1923, 75 ft.

CHICAGO, ILLINOIS

Weather Bureau observations began Nov. 1, 1870. Removals occurred Oct. 15, 1871, June 11, 1872, June 8, 1873, Jan. 1, 1887, Feb. 1, 1890, and July 1, 1905. The readings of the barometer are all reduced to its level in 1900, 823.3 ft. above sea level.

Heights of thermometers above ground were: 1873-1886, 70 ft.; 1887-1889, 146 ft.; 1890-1904, 241 ft.; 1905-1923, 140 ft.; and of the rain gage, 1873-1886, 93 ft.; 1887-1889, 132 ft.; 1890-1904, 238 ft.; 1905-1923, 133 ft.

CINCINNATI, OHIO

Weather Bureau observations began Nov. 1, 1870. Removals occurred July 6, 1877, Mar. 1, 1885, and Apr. 1, 1915. The barometer readings are all reduced to its level in 1900, 627.8 ft. above sea level.

Heights of thermometers above ground were: 1877-1884, 68 ft.; 1885-1914, 152 ft.; 1915-1923, 11 ft.; and of the rain gage, 1877-1884, 76 ft.; 1884-1887, 149 ft.; 1888-1914, 145 ft.; 1915-1923, 3 ft.

CORPUS CHRISTI, TEXAS

Weather Bureau observations began Feb. 1, 1887. Removals occurred July 10, 1901, Nov. 1, 1908, and Jan. 1, 1921. The readings of the barometer are all reduced to its level in 1900, 20.4 ft. above sea level.

Heights of thermometers above ground were: 1887-1901, 42 ft.; 1902-1908, 48 ft.; 1909-1920, 69 ft.; 1921-1923, 11 ft.; and of the rain gage, 1887-1901, 34 ft.; 1902-1908, 38 ft.; 1909-1920, 61 ft.; 1921-1923, 63 ft.

DENVER, COLORADO

Weather Bureau observations began Nov. 20, 1871. Removals occurred July 1, 1877, June 13, 1881, Dec. 1, 1887, May 1, 1891, Oct. 1, 1895, Dec. 8, 1904, and Jan. 29, 1916. The readings of the barometer are all reduced to its level in 1900, 5290.7 ft. above sea level.

Heights of thermometers above ground were: 1873-1875, 37 ft.; 1876-1877, 38 ft.; 1878-1880, 45 ft.; 1877-1884, 73 ft.; 1886, 105 ft.; 1888-1890, 86 ft.; 1891-1895, 108 ft.; 1896, 83 ft.; 1897-1904, 79 ft.; 1905-1915, 129 ft.; 1916-1923, 106 ft.; and of the rain gage, 1873-1875, 52 ft.; 1876-1877, 55 ft.; 1878-1880, 86 ft.; 1877-1881, 85 ft.; 1882-1887, 86 ft.; 1888-1890, 79 ft.; 1891-1892, 107 ft.; 1893-1895, 97 ft.; 1896-1904, 74 ft.; 1905-1915, 119 ft.; 1916-1923, 98 ft.

DETROIT, MICHIGAN

Weather Bureau observations began Nov. 1, 1870. Removals occurred May 15, 1871, Feb. 7, 1881, Nov. 15, 1890, June 4, 1896, Apr. 10, 1901, and June 15, 1907. The readings of the barometer are all reduced to its level in 1900, 729.7 ft. above sea level.

Heights of thermometers above ground were: 1871-1889, 76 ft.; 1881-1890, 61 ft.; 1891-1896, 158 ft.; 1896-1907, 153 ft.; 1908-1923, 218 ft.; and of the rain gage, 1871-1880, 80 ft.; 1881-1890, 71 ft.; 1891-1895, 144 ft.; 1896-1907, 147 ft.; 1908-1923, 214 ft.

EASTPORT, MAINE

Weather Bureau observations began Apr. 1, 1873. Removals occurred Jan. 1, 1887, Oct. 14, 1893. The readings of the barometer are all reduced to its level in 1900, 75.7 ft. above sea level.

Heights of thermometers above ground were: 1873-1886, 33 ft.; 1887-1893, 50 ft.; 1894-1908, 69 ft.; 1909-1923, 67 ft.; and of the rain gage, 1873-1886, 58 ft.; 1887-1893, 43 ft.; 1894-1923, 62 ft.

EL PASO, TEXAS

Weather Bureau observations began Apr. 1, 1878. Removals occurred Apr. 24, 1880, Nov. 1, 1881, Nov. 1, 1882, Apr. 1, 1888, Aug. 8, 1894, and Dec. 29, 1907. The readings of the barometer are all reduced to its level in 1900, 3762.1 ft. above sea level.

Heights of thermometers above ground were: 1878-1882, 17 ft.; 1883-1887, 21 ft.; 1888-1894, 66 ft.; 1895-1907, 10 ft.; 1908-1923, 110 ft.; and of the rain gage, 1878-1882, 14 ft.; 1883-1887, 34 ft.; 1888-1894, 60 ft.; 1895-1907, 2 ft.; 1908-1923, 102 ft.

GALVESTON. TEXAS

Weather Bureau observations began Apr. 19, 1871. Removals occurred Sept. 1, 1874, July 30, 1878, May 9, 1882, Mar. 15, 1883, Apr. 4, 1888, June 25, 1898, and Nov. 27, 1900. The readings of the barometer are all reduced to its level in 1900, 54.1 ft. above sea level.

Heights of thermometers above ground were: 1871-1874, 41 ft.; 1875-1881, 37 ft.; 1880-1882, 50 ft.; 1883-1887, 37 ft.; 1888-1900, 84 ft.; 1901-1923, 106 ft.; and of the rain gage, 1871-1874, 57 ft: 1875-1877, 50 ft.; 1878-1881, 52 ft.; 1882, 94 ft.; 1883-1887, 51 ft.; 1888-1900, 72 ft.; 1901-1923, 98 ft.

HATTERAS, NORTH CAROLINA

Weather Bureau observations began Dec. 1, 1880. Removals occurred Oct. 1, 1883, Apr. 1, 1887, and Jan. 1, 1902. The readings of the barometer are all reduced to its level in 1900, 11.3 ft. above sea level.

Heights of thermometers above ground were: 1880-1883, 6 ft.; 1884-1886, 7 ft.; 1887-1901, 6 ft.; 1902-1921, 12 ft.; 1922-1923, 11 ft.; and of the rain gage, 1880-1883, 1 ft.; 1884-1886, 2 ft.; 1887-1901, 3 ft.; 1902-1912, 34 ft.; 1913-1920, 37 ft.; 1921-1923, 4 ft.

HELENA, MONTANA

Weather Bureau observations began Apr. 1, 1880. Removals occurred Jan. 1, 1884, May 1, 1891, Apr. 1, 1894, Aug. 1, 1904, and Feb. 26, 1912. The readings of the barometer are all reduced to its level in 1900, 4110.0 ft. above sea level.

Heights of thermometers above ground were: 1880-1883, 6 ft.; 1884-1890, 21 ft.; 1891-1893, 85 ft.; 1894-1904, 88 ft.; 1905-1911, 8 ft.; 1912-1923, 87 ft.; and of the rain gage, 1880-1883, 1 ft.; 1884-1890, 57 ft.; 1891-1893, 75 ft.; 1894-1904, 80 ft.; 1895-1911, 3 ft.; 1912-1923, 80 ft.

KEY WEST, FLORIDA

Weather Bureau observations began Nov. 1, 1870. Removals occurred Aug. 1, 1871, Mar. 1, 1872, Mar. 1, 1882, Apr. 12, 1886, Jan. 1, 1887, Apr. 1, 1897, May 23, 1903, Oct. 1, 1911, and Jan. 23, 1913. The readings of the barometer are all reduced to its level in 1900, 21.6 ft. above sea level.

Heights of thermometers above ground were: 1873-1881, 43 ft.; 1882-1885, 20 ft.; 1886, 47 ft.; 1887-1902, 43 ft.; 1903-1911, 10 ft.; 1912, 41 ft.; 1913-1923, 10 ft.; and of the rain gage, 1873-1881, 52 ft.; 1882-1885, 42 ft.; 1886, 58 ft.; 1887-1902, 46 ft.; 1903-1911, 3 ft.; 1912, 32 ft.; 1913-1923, 3 ft.

LITTLE ROCK, ARKANSAS

Weather Bureau observations began July 1, 1879. Removals occurred Mar. 1, 1887, Nov. 16, 1892, July 1, 1898, Oct. 9, 1907, July 1, 1920. The readings of the barometer are all reduced to its level in 1900, 356.8 ft. above sea level.

Heights of thermometers above ground were: 1879-1886, 26 ft.; 1887-1892, 73 ft.; 1893-1898, 72 ft.; 1899-1907, 93 ft.; 1908-1920, 139 ft.; 1920-1923, 136 ft.; and of the rain gage, 1879-1886, 58 ft.; 1887-1892, 56 ft.; 1893-1898, 62 ft.; 1899-1907, 85 ft.; 1908-1920, 132 ft.; 1921-1923, 129 ft.

MARQUETTE, MICHIGAN

Weather Bureau observations began May 11, 1871. Removals occurred Aug. 6, 1880, Mar. 1, 1885, Aug. 1, 1889, and Dec. 22, 1900. The readings of the barometer are all reduced to its level in 1900, 734.4 ft. above sea level.

Heights of thermometers above ground were: 1871-1880, 32 ft.; 1881-1884, 36 ft.; 1885-1889, 66 ft.; 1890-1900, 67 ft.; 1901-1903, 79 ft.; 1904-1923, 77 ft.; and of the rain gage, 1871-1880, 44 ft.; 1881-1884, 57 ft.; 1885-1889, 56 ft.; 1890-1900, 58 ft.; 1901-1904, 69 ft.; 1905-1923, 70 ft.

MOBILE, ALABAMA

Weather Bureau observations began Nov. 7, 1870. Removals occurred May 1, 1872, Nov. 18, 1880, Nov. 1, 1881, July 1, 1884, Oct. 10, 1892, Sept. 1, 1905, Nov. 1, 1913. The readings of the barometer are all reduced to its level in 1900, 57.3 ft. above sea level.

Heights of thermometers above ground were: 1872-1880, 32 ft.; 1881, 65 ft.; 1882-1883, 36 ft.; 1884-1895, 87 ft.; 1896-1905, 88 ft.; 1906-1913, 98 ft.; 1914-1923, 125 ft.; and of the rain gage, 1871, 63 ft.; 1872-1880, 53 ft.; 1881, 85 ft.; 1882-1883, 51 ft.; 1884-1892, 81 ft.; 1893-1905, 79 ft.; 1906-1913, 91 ft.; 1914-1923, 119 ft.

MODENA, UTAH

Weather Bureau observations began Jan. 1, 1901. Removal occurred June 1, 1903. Height of barometer above sea level 5479.0 ft. Height of thermometers above ground, 10 ft.; and of rain gage, 2 ft. No removals or changes in height of instruments have occurred.

NASHVILLE, TENNESSEE

Weather Bureau observations began Oct. 20, 1870. Removals occurred Mar. 1, 1871, Aug. 1, 1882, July 1, 1889, Sept. 1, 1894, July 1,

1905, and ______, 1909. The readings of the barometer are all reduced to its level in 1900, 545.8 ft. above sea level.

Heights of thermometers above ground were: 1871-1882, 34 ft.; 1883-1884, 61 ft.; 1885-1888, 92 ft.; 1889-1894, 98 ft.; 1895-1905, 122 ft.; 1905-1908, 79 ft.; 1909-1923, 168 ft.; and of the rain gage, 1871-1882, 49 ft.; 1883-1888, 79 ft.; 1888-1893, 85 ft.; 1894-1905, 115 ft.; 1905-1908, 74 ft.; 1909-1923, 161 ft.

NEW HAVEN, CONNECTICUT

No details of the earlier observations are available. Weather Bureau observations began Dec. 10, 1872. Removals occurred Jan. 1, 1904, Mar. 1, 1919. The readings of the barometer are all reduced to its level in 1900, 106.5 ft. above sea level.

Heights of thermometers above ground were: 1872-1880, 85 ft.; 1881-1888, 112 ft.; 1889-1903, 118 ft.; 1904-1910, 116 ft.; 1911-1918, 117 ft.; 1919-1923, 74 ft.; and of the rain gage, 1872-1880, 108 ft.; 1880-1903, 109 ft.; 1904-1918, 111 ft.; 1919, 155 ft.; 1920-1923, 68 ft.

NEW ORLEANS, LOUISIANA

Weather Bureau observations began Oct. 24, 1870. Removals occurred Nov. 18, 1870, Oct. 31, 1871, Mar. 3, 1880, Oct. 31, 1891, Dec. 5, 1908, and Mar. 24, 1915. The readings of the barometer are all reduced to its level in 1900, 51.3 ft. above sea level.

Heights of thermometers above ground were: 1880-1890, 45 ft.; 1891-1900, 112 ft.; 1901-1914, 88 ft.; 1915-1923, 76 ft., and of the rain gage, 1881-1882, 77 ft.; 1883-1890, 84 ft.; 1891-1900, 111 ft.; 1901-1914, 78 ft.; 1915-1923, 71 ft.

NEW YORK, NEW YORK

No details of the earlier observations are available. Weather Bureau observations began Oct. 25, 1870. Removals occurred July 26, 1871, Oct. 13, 1875, Apr. 1, 1886, Mar. 17, 1887, June 8, 1887, Mar. 15, 1895, Oct. 16, 1898, Nov. 1899, and May 1, 1911. The readings of the barometer are all reduced to its level in 1900, 313.6 ft. above sea level.

Heights of thermometers above ground were: 1875-1877, 144 ft.; 1878-1886, 148 ft.; 1887-1894, 183 ft.; 1895-1898, 298 ft.; 1899-1910, 313 ft.; 1911-1923, 414 ft.; and of the rain gage, 1875-1877, 139 ft.; 1878-1886, 145 ft.; 1887-1894, 155 ft.; 1895-1898, 247 ft; 1899-1910, 305 ft.; 1911-1923, 407 ft.

NORTH PLATTE, NEBRASKA

Weather Bureau observations began Sept. 18, 1874. Removals occurred June 21, 1876, Feb. 11, 1882, and Dec. 1, 1905. The readings of the barometer are all reduced to its level in 1900, 2820.6 ft. above sea level.

Heights of thermometers above ground were: 1874-1875, 27 ft.; 1876-1878, 50 ft.; 1879-1881, 19 ft.; 1882-1905, 43 ft.; 1906-1923, 11 ft.; and of the rain gage, 1871-1875, 1 ft.; 1876-1881, 8 ft.; 1882-1905, 35 ft.; 1906-1923, 3 ft.

OMAHA, NEBRASKA

Weather Bureau observations began Nov. 1, 1870. Removals occurred Dec. 1, 1871, Dec. 1, 1872, Oct. 23, 1878, July 1, 1893, May 17, 1899. The readings of the barometer have all been reduced to its level in 1900, 1105.3 ft. above sea level.

Heights of thermometers above ground were: 1870-1872, 18 ft.; 1873-1878, 38 ft.; 1879-1892, 59 ft.; 1886-1893, 88 ft.; 1893-1898, 92 ft.; 1899-1923, 115 ft.; and of the rain gage, 1870-1872, 39 ft.; 1873-1878, 54 ft.; 1879-1892, 75 ft.; 1893-1898, 86 ft.; 1899-1923, 107 ft.

OREGON, MISSOURI

No details available.

PHILADELPHIA, PENNSYLVANIA

No details of the earlier observations are available.

Weather Bureau observations began Jan. 1, 1871. Removals occurred Sept. 21, 1871, Feb. 1, 1882, Apr. 1, 1884. The readings of the barometer are all reduced to its level in 1900, 113.6 ft. above sea level.

Heights of thermometers above ground: 1881, 99 ft.; 1882-1883, 54 ft.; 1884, 174 ft.; 1888-1903, 168 ft.; 1904-1910, 116 ft.; 1911-1923, 123 ft.; and of the rain gage, 1881, 95 ft.; 1882-1883, 106 ft.; 1884-1903, 167 ft.; 1904-1910, 116 ft.; 1911-1923, 114 ft.

PHOENIX, ARIZONA

Weather Bureau observations began Feb. 6, 1876, discontinued in 1882, and began again Aug. 6, 1895. Removals occurred Aug. 1, 1901, Mar. 24, 1913, and June 27, 1916. The readings of the barometer are all reduced to its level in 1900, 1108.2 ft. above sea level.

Heights of thermometers above ground were: 1879-1882, 4 ft.; 1895-1901, 47 ft.; 1902-1912, 50 ft.; 1913-1915, 76 ft.; 1916-1923, 11 ft.; and of the rain gage, 1879-1882, 3 ft.; 1895-1901, 39 ft.; 1902-1906, 40 ft.; 1907-1912, 41 ft.; 1913-1923, 68 ft.

PORTLAND, OREGON

Weather Bureau observations began Nov. 1, 1871. Removals occurred Dec. 21, 1872, Jan. 1, 1878, Aug. 1, 1885, Oct. 5, 1892, and June 8, 1902. The readings of the barometer are all reduced to its level in 1900, 153.6 ft. above sea level.

Heights of thermometers above ground were: 1872-1877, 34 ft.; 1878-1884, 45 ft.; 1885-1892, 85 ft.; 1893-1901, 203 ft.; 1902-1923, 68 ft.; and of the rain gage, 1872-1877, 47 ft.; 1878-1884, 60 ft.; 1885-1892, 75-80 ft.; 1893-1896, 196 ft.; 1897-1901, 145 ft.; 1902-1923, 63 ft.

RED BLUFF, CALIFORNIA

Weather Bureau observations began July 1, 1877. Removals occurred Aug. 12, 1880, Sept. 28, 1882, June 15, 1886, and Apr. 1, 1900. The readings of the barometer are all reduced to its level in 1900, 331.5 ft. above sea level.

Heights of thermometers above ground were: 1877-1880, 32 ft.; 1881-1883, 20 ft.; 1884-1885, 23 ft.; 1886-1899, 54 ft.; 1900-1923, 50 ft.; and of the rain gage, 1877-1880, 48 ft.; 1881-1885, 36 ft.; 1886-1899, 44 ft.; 1900-1923, 40 ft.

SAINT LOUIS, MISSOURI

Details of earlier observations lacking.

Weather Bureau observations began Nov. 1, 1870. Removals occurred Mar. 1, 1873, Sept. 15, 1883, Feb. 14, 1896, Aug. 16, 1903, Sept. 30, 1913, and July 15, 1921. The readings of the barometer are all reduced to its level in 1900, 567.4 ft. above sea level.

Heights of thermometers above ground were: 1881-1882, 104 ft.; 1883-1884, 70 ft.; 1886, 104 ft.; 1889, 107 ft.; 1891-1896, 110 ft.; 1897-1903, 111 ft.; 1904-1913, 208 ft.; 1914-1923, 265 ft.; and of the rain gage, 1871-1903, 100 ft.; 1904-1913, 199 ft.; 1914-1923, 258 ft.

SAINT PAUL, MINNESOTA

Details of earlier observations lacking.

Weather Bureau observations began Nov. 1, 1870. Removals occurred Dec. 27, 1871, Apr. 24, 1878, Apr. 16, 1883, July 1, 1885,

July 1, 1904, Jan. 1, 1911, and July 1, 1918. The readings of the barometer are all reduced to its level in 1900, 836.8 ft. above sea level.

Heights of thermometers above ground were: 1878-1882, 32 ft.; 1883-1885, 44 ft.; 1886-1902, 114 ft.; 1903, 102 ft.; 1904-1910, 171 ft.; 1911-1917, 201 ft.; 1918-1923, 236 ft.; and of rain gage, 1878-1882, 58 ft.; 1883-1885, 61 ft.; 1886-1896, 108 ft.; 1897-1903, 93 ft.; 1904-1910, 163 ft.; 1911-1917, 196 ft.; 1918-1923, 228 ft.

SALT LAKE CITY, UTAH

Weather Bureau observations began Mar. 19, 1874. Removals occurred July 1, 1876, Aug. 1, 1891, Mar. 19, 1899, and July 1, 1909. The readings of the barometer are all reduced to its level in 1900, 4360.4 ft. above sea level.

Heights of thermometers above ground were: 1874-1875, 30 ft.; 1876-1885, 52 ft.; 1886-1891, 92 ft.; 1892-1898, 83 ft.; 1899-1908, 105 ft.; 1909-1923, 163 ft.; and of the rain gage, 1874-1875, 43 ft.; 1876-1885, 75 ft.; 1886-1888, 79 ft.; 1889-1891, 82 ft.; 1892-1898, 75 ft.; 1899-1908, 97 ft.; 1909-1923, 156 ft.

SAN DIEGO, CALIFORNIA

Weather Bureau observations began Nov. 1, 1871. Removals occurred Oct. 30, 1875, Apr. 24, 1878, Apr. 1, 1886, Jan. 1, 1889, May 1, 1895, May 1, 1897, Apr. 1, 1913. The readings of the barometer are all reduced to its level in 1900, 86.8 ft. above sea level.

Heights of thermometers above ground were: 1875-1877, 23 ft.; 1878-1885, 19 ft.; 1886-1888, 23 ft.; 1889-1894, 73 ft.; 1895-1896, 59 ft.; 1897-1912, 95 ft.; 1913-1923, 62 ft.; and of the rain gage, 1875-1877, 42 ft.; 1878-1885, 30 ft.; 1886-1888, 42 ft.; 1889-1894, 64 ft.; 1895-1896, 52 ft.; 1897-1912, 86 ft.; 1913-1923, 55 ft.

SAN FRANCISCO, CALIFORNIA

Weather Bureau observations began Feb. 2, 1871. Removals occurred Sept. 4, 1890, Nov. 1, 1892, May 1 and Oct. 1, 1906, and Oct. 22, 1914. The readings of the barometer are all reduced to its level in 1900, 155.3 ft. above sea level.

Heights of thermometers above ground were: 1881-1882, 48 ft.; 1871-1890, 45 ft.; 1891-1892, 109 ft.; 1893-1905, 161 ft.; 1906, 25 ft.; 1907-1914, 200 ft.; 1915-1918, 209 ft.; 1919-1923, 208 ft.; and of the rain gage, 1871-1890, 68 ft.; 1891-1892, 101 ft.; 1893-1905, 154 ft.; 1906, 40 ft.; 1907-1914, 191 ft.; 1915-1918, 200 ft.; 1919-1923, 202 ft.

SAN LUIS OBISPO, CALIFORNIA

Weather Bureau observations began June 1, 1885. Removals occurred Aug. 1, 1894, June 1, 1895, June 30, 1902, and June 30, 1914. The readings of the barometer are all reduced to its level in 1900, 201.4 ft. above sea level.

Heights of thermometers above ground were: 1885-1893, 69 ft.; 1894, 50 ft.; 1895-1902, 10 ft.; 1903-1914, 47 ft.; 1915-1923, 32 ft.; and of the rain gage, 1885-1894, 42 ft.; 1895-1902, 3 ft.; 1903-1914, 40 ft.; 1915-1923, 23 ft.

SANTA FE, NEW MEXICO

Weather Bureau observations began Nov. 20, 1871. Removals occurred June 28, 1871, Mar. 27, 1878, July 1, 1881, Mar. 1, 1882, Dec. 1, 1884, Jan. 1, 1892, Mar. 1, 1893, Aug. 27, 1904, July 25, 1907, Apr. 12, 1912, and Mar. 29, 1922. The readings of the barometer are all reduced to its level in 1900, 7012.6 ft. above sea level.

Heights of thermometers above ground were: 1873-1877, 18 ft.; 1878-1880, 21 ft.; 1881, 5 ft.; 1882-1884, 52 ft.; 1885-1891, 35 ft.; 1892, 59 ft.; 1893-1904, 47 ft.; 1905-1907, 33 ft.; 1908-1911, 8 ft.; 1912-1921, 57 ft.; 1922-1923, 38 ft.; and of the rain gage, 1873-1877, 26 ft.; 1878-1880, 18 ft.; 1881, 2 ft.; 1882-1884, 68 ft.; 1885-1891, 29 ft.; 1892, 52 ft.; 1893-1904, 39 ft.; 1905-1907, 28 ft.; 1908-1911, 3 ft.; 1912-1921, 49 ft.; 1922-1923, 31 ft.

SPOKANE, WASHINGTON

Weather Bureau observations began Feb. 1, 1881. Removals occurred Jan. 1, 1882, Nov. 30, 1884, Jan. 1, 1887, Aug. 11, 1889, Sept. 6, 1889, Nov. 15, 1889, Nov. 7, 1890, Aug. 1, 1892, Dec. 1, 1896, and July 1, 1902. The readings of the barometer are all reduced to its level in 1900, 1943.4 ft. above sea level.

Heights of thermometers above ground were: 1881, 18 ft.; 1882-1884, 22 ft.; 1885-1886, 24 ft.; 1887-1888, 41 ft.; 1889, 46 ft.; 1890-1892, 100 ft.; 1893-1901, 99 ft.; 1902-1923, 101 ft.; and of the rain gage, 1881, 2 ft.; 1882-1883, 32 ft.; 1884-1886, 40 ft.; 1887-1888, 39 ft.; 1889, 35 ft.; 1890-1892, 92 ft.; 1893-1901, 90 ft.; 1902-1923, 94 ft.

WASHINGTON, DISTRICT OF COLUMBIA

Weather Bureau observations began Nov. 1, 1870. Removals occurred Mar. 10, 1872, Aug. 15, 1888, Mar. 22, 1889. The readings of the barometer are all reduced to its level in 1900, 111.6 ft. above sea level.

Heights of thermometers above ground were: 1872-1887, 44 ft.; 1888, 58 ft.; 1889-1906, 59 ft.; 1907, 42 ft.; 1908-1923, 62 ft.; and of rain gage, 1870-1871, 53 ft.; 1872-1888, 51 ft.; 1889-1923, 42 ft.

NORTH ATLANTIC

AZORES

HORTA

AUTHORITY.

Serviço Meteorológico dos Açores, Ponta Delgada, San Miguel, Acores.

PRESSURE.

Site: The height of the barometer cistern above Mean Sea Level was:

| 1902 to 1914 | m. |
|--|-----|
| 1915 to 1923 | m. |
| All values have been corrected to Mean Sea Level by appl | ly- |
| ing the following corrections: | |

| 1902 to 1914 | +2.60 mm | ı. |
|--------------|-----------|----|
| 1915 to 1923 | + 5.86 mm | ı. |

Instrument: The pressure values are obtained from a barograph controlled by readings of a standard barometer read 5 times a day.

Hours: The values are the means of hourly readings from the barograms.

Notes: All values have been corrected to normal gravity (Lat. 45°) by applying a correction of -0.45 mm.

TEMPERATURE.

Site: The height of the thermometer screen above Mean Sea Level was:

| 1902 to 1914 | 31 | m. |
|--------------|----|----|
| 1915 to 1923 | | m. |

Hours: From 1902 to 1907 the temperature values are from observations of a standard thermometer at 9^h, 12^h, 15^h, 21^h, corrected to the mean of 24 hourly readings by the following corrections, based on hourly values 1908 to 1924:

Jan. Feb. Mar. Apr. May June July Aug. Sept. Oct. Nov. Dec. C. -0.45 -0.53 -0.65 -0.73 -0.86 -0.91 -1.10 -1.05 -1.07 -0.79 -0.50 -0.48

From 1908 to 1924 the values are the means of the 24 hourly readings from a thermograph, compared with a standard thermometer 5 times a day.

|-------|---------------|---------------|------------|----------------|
|-------|---------------|---------------|------------|----------------|

1902 to 191432 m.

Instrument: A recording rain gage of Fascianelli, with a receiver 0.2 m. in diameter, was in use throughout.

PONTA DELGADA

AUTHORITY.

Serviço Meteorológico dos Açores, Ponta Delgada, San Miguel, Açores.

PRESSURE.

Site: The height of the barometer cistern above Mean Sea Level was:

All values have been corrected to Mean Sea Level by applying the following corrections:

Instrument: The pressure values are obtained from a barograph controlled by readings of a standard barometer, read 5 times a day.

Hours: The values are means of hourly readings from the barograms.

Notes: All values have been corrected to normal gravity (Lat. 45°) by applying a correction of -0.45 mm.

TEMPERATURE.

Site: The height of the thermometer screen was 36 m. above Mean Sea Level throughout the period.

Hours: From 1894 to 1907 the temperature values are from observations of a standard thermometer at 9h, 12h, 15h, 21h, corrected to the mean of 24 hourly readings by the following corrections, based on hourly values 1908 to 1924:

Jan. Feb. Mar. Apr. May June July Aug. Sept. Oct. Nov. Dec.
*C. -0.88 -0.41 -0.61 -0.63 -0.76 -0.84 -0.86 -0.93 -0.84 -0.89 -0.49 -0.89

From 1908 to 1924 the values are the means of the 24 hourly readings from a thermograph, compared with a standard thermometer 5 times a day.

PRECIPITATION.

Site: The height of the rain gage above Mean Sea Level was 37.5 m. throughout the period.

Instrument: From 1894 till 1896, October 11, a Babinet rain gage with a receiver 0.113 m. in diameter, was in use. From 1896, October 12 to 1923, a recording rain gage of Fascianelli with a receiver 0.2 m. in diameter was in use.

Notes: The exposure of the rain gage at the Observatory is not good, and for comparison observations are taken at Faja de Cima, a station with a good exposure near Ponta Delgada at a height of 175 m. To make the values taken at the Observatory comparable with those at Faja de Cima, the observations should be increased by 50 per cent.

BERMUDA

Lat. 32° 18′ N. Long. 64° 46′ W.

AUTHORITIES.

- 1866 to 1886. Manuscript returns filed in the Meteorological Office, London.
- 1887 to 1888. London, Army Medical Department. Annual abstract of meteorological observations taken at Netley and stations abroad. London, Army Medical Dept. Reports!
- 1889 to 1893. Manuscript data supplied by the Meteorological Office, Toronto and filed in the Meteorological Office, London.
- 1894 to 1900. Manuscript returns filed in the Meteorological Office, London.
- 1901 to 1910. Manuscript data supplied by the Meteorological Office, Toronto and filed in the Meteorological Office, London.
- 1911 to 1920. Bermuda, Meteorological observations taken at Prospect. Monthly sheets.

Pressure.

Changes of Site:

1866, January to 1869 November. St. George's $H_b=61$ ft. 1870, April to 1873 August, Hamilton. $H_b=120$ ft.

For corrections applied to reduce to 151 ft. see Table A.

1873, September to 1920 December. Hamilton H_b=151 ft.
 There is a break from December 1869 to March 1870 "owing to the moving of the P. M. O. Office from St.

George's to Hamilton and the great difficulty there of obtaining a good site for the erection of the Observatory." (Ms. Return, March 1870.)

In 1901 the name of the station is changed to Prospect, but apparently without any change of site, the height remaining as 151 ft.

Changes of Instrument:

- 1866, January to 1872, December. Bar. No. 34. Negretti and Zambra. Index correction +.031 in. applied.
- 1873, January, probably to 1920 December. Bar. No. 10,
 Negretti and Zambra. Index correction 1873 to
 1893 +.010 in., 1894 probably to 1910 +.012 in.
 (no information is available as to the reasons for
 these changes of index correction). 1911-1920,
 index correction given as +.010 in.
- Hours of Observation: The combination $\frac{1}{2}(9^h + 15^h)$ has been adopted as a standard.
 - From 1866 to 1888 observations were taken at 9^h and 15^h From 1889 to 1910 observations were taken at 9^h and 21^h.

 The mean ½(9^h+21^h) has been reduced to ½(9^h+15^h) by means of the corrections given in table B, which were obtained from observations and 15^h and 20^h 41^m during the years 1913 to 1918.
 - From 1911 to 1920 observations were taken $8^h 41^m$, 15^h and $20^h 41^m$. The observation hour of $8^h 41^m$ was accepted as equivalent to 9^h and the mean $\frac{1}{2}(8^h 41^m + 15^h)$ was adopted for this period.
 - The observation hour of 20^h 41^m was accepted as equivalent to 21^h in calculating the corrections given in table B.
 - From April to October 1919 inclusive observations were taken at $7\frac{1}{2}^h$ and 14^h . This combination has been accepted as equivalent to $\frac{1}{2}(9+15^h)$ and no correction has been applied.
- Notes: From January 1911 to March 1914 the printed reports accepted as equivalent to ½(9^h+15^h) and no correction +.010 in." and from February 1912 to December 1920 the pressure columns are headed "Corrected for index error and gravity and reduced to 32° F." In March 1914 it was pointed out that the appropriate gravity correction for Ber-

muda was -.033 in., and in reply the Senior Medical Officer stated (27th April, 1914) that the figure +.010 in. was the correction for index error and that the gravity correction had in fact not been applied. From this statement, which is supported by a comparison of the whole series of annual means with those at the nearest stations on the coast of America, it was inferred that the observations had been corrected for index error, but not for gravity, and the latter correction (-.033 in.) has been applied throughout.

1891 to 1893. Manuscript data supplied by the Meteorological Office, Toronto and filed in the Meteorological Office, London.

1894 to 1900. As for Pressure.

1901 to 1910. Toronto, Meteorological Service of Canada, Annual Report.

1911 to 1920. As for Pressure.

Site: See note under Pressure.

Observations: The combination $1(9^h+21^h+Max.+Min.)$ appears to give a good representation of the 24-hour mean. From 1866 to 1890 and from 1894 to 1900 many of the observations of the daily minimum temperature appear to be unreliable and the means for 1866-1890 and 1894 to 1900 are the means of the readings at 9^h corrected to the com-

bination $\frac{1}{4}(9^h + 21^h + \text{Max.} + \text{Min.})$ by means of the corrections given in Table A, based on the observations for the period 1911 to 1920.

From 1891 to 1893 the values given are the means of mean daily maximum and mean daily minimum corrected to the combination $\frac{1}{2}(9^h + 21^h + \text{Max.} + \text{Min.})$ by applying the corrections given in Table A.

From 1901 to 1910 the values given are the direct means $\frac{1}{2}(0^h+21^h+Max.+Min.)$.

From 1911 to 1920 the values are $\frac{1}{4}(8^h 4^{1m} + 20^h 4^{1m} + Max. + Min.)$ except during April to October 1919, which are $\frac{1}{4}(7\frac{1}{2}^h + 19\frac{1}{2}^h + Max. + Min.)$. No correction appears to be necessary to the values for these seven months.

Table A.—Corrections to Reduce Temperature to the Combination $\frac{1}{4}(9^h + 2I^h + Max. + Min.)$

Authorities:

1887 to 1890. From a rainfall series compiled by W. H. Potter and published in the Monthly Weather Review, vol. 53, 1925, p. 24.

1891 to 1893. As for Temperature.

1894 to 1920. As for Pressure.

In the years 1866 to 1886, a few values, not obtainable in manuscript, were taken from the same authority as 1887 to 1890. The values so obtained are in italic.

Site: The station was removed from St. George's to Hamilton (Prospect Hill) between November 1869 and March 1870. The rainfall amounts for the years 1866 to 1869 are probably not comparable with those from 1870 onwards.

The values for St. Ann's, 1853 to 1894, have been made comparable with the observations at the Botanic Station, 1895-1920, by the application of this correction.

BELEN COLLEGE OBSERVATORY, HABANA, CUBA

Belen College Observatory has been situated in the old city of Habana from 1857 to 1925. From 1857 to 1897 it was on the third floor over the front of the college, facing east. In 1897 the observatory was enlarged and the instruments were installed in a tower over the fourth floor, still facing east. This tower was 95 m. from the church belfry, the only other neighboring building higher than the Observatory.

There has been only one change in the position of the instruments, which took place in 1897, thus forming two series, one from 1857 to 1897, the other from 1898 to 1925.

In the first series the cistern of the barometer was 19.3 m. above sea level, the thermometer at 14.5 m. above the level of the street, and the mouth of the rain gage 19 m. above the street.

In the second series the cistern of the barometer was 24.34 m. above sea level, the thermometer 20.5 m. above the street, except for a few years when it was 25.3 m. above the street; and the rain gage was 24.95 m. above the street.

The tables of atmospheric pressure and temperature, respectively, are the means of ten daily bi-hourly observations, from 4^h to 20^h inclusive. As the observations between 24^h and 2^h are lacking, the diurnal period is not complete.

In the pressure table, attention is called to the period of the first 14 years, during which the means are somewhat low in relation to all the rest of the series. During these years all ten daily eye observations were not made; for this reason a discrepancy is shown in relation to the rest of the series.

The temperature table begins with 1871, the ten daily eye observations having been started that year and continued without interruption. Account should be taken of the position of the thermometers which had a northerly window exposure from 1871 to 1897. They were protected on the inside by a glass and shutters and on the outside by more shutters. This window was situated over a nearby roof, which tended to elevate the temperature by radiation or convection, most noticeably during spells of calm and strong solar action.

After 1897 the thermometers were put in a box with double shutters and placed on the roof of the building, where there was free circulation of air in all directions.

As the monthly and yearly means are taken from the monthly publication of the Observatory, and are means of 10 daily bihourly observations, the results are somewhat high, on account of the lack of observations between 24^h and 3^h. Nevertheless they give faithfully the trend of the temperature and the variations from year to year.

TABLE B .- (orrections Applied for Reduction to Mean of 24 Hours. Inches

MEAN TEMPERATURE.

Authorities: As for Pressure, but the values previous to 1874, January, were rejected as being doubtful.

Site: See note under Pressure.

Observations: The standard adopted is the mean of the mean daily maximum and mean daily minimum. These figures were unreliable or wanting in certain months and the values in italics have been computed from the fixed morning hour of observation by means of the following correction obtained from a number of the most reliable records.

PRECIPITATION.

Authorities: As for Pressure. Data for 1866-1870 were obtained from meteorological returns communicated by the Royal Army Medical Corps and filed in the Meteorological Office, London.

Site: See note under Pressure. The values for the two periods are probably comparable.

PORT AU PRINCE, HAITI

AUTHORITY.

Bulletin Semestriel, Seminaire Collège St. Martial, 1888-1925. The records have been checken and brought down to date by Prof. Sherer.

The observations from 1865 to 1869 were made by Prof. Ackermann and published in the Jahrbücher der k. k. Zentral-Anstalt für Meteorologie und Geodynamik, Wien, 1893 and also in Proceedings of the American Philosophical Society. Vol. XI, 1870, No. 84, pp. 499-519.

PRESSURE.

The height of the barometer from 1888 to 1907 was 37.0 m. (owing to faulty measurements the height was given too low in the early publications). In 1908 the height was changed to 37.4 m. and remained at that level up to 1925. The means given are those derived from observations at 7^h, 13^h and 21^h. To correct these means to 24 hour means apply the following corrections:

The pressure readings were corrected for temperature and a correction of -1.57 was applied to reduce to gravity at 45° Lat.

TEMPERATURE.

The hours of observations were the same as those for pressure and the means are $\frac{1}{7}(7^h+13^h+21^h+21^h)$.

PRECIPITATION.

The precipitation records are in millimeters and obtained from the same sources as those of pressure and temperature.

RICHMOND HILL, GRENADA

Lat. 12° 5' N. Long. 61° 46' W.

PRESSURE.

Authorities: 1891-1920. Grenada Government Gazettes.

Site: The height of the barometer above Mean Sea Level was 500 ft. throughout the period.

Instrument: Barometer 1575, Negretti and Zambra appears to have been in use throughout.

Hours:

1891-1907. 9^h. 1908-1920. 9^h and 18^h.

The values for 1891 to 1907 are corrected to $\frac{1}{2}(9^h + 18^h)$ by the addition of the following corrections:

Jan. Feb. Mar. Apr. May June July Aug. Sept Oct. Nov. Dec. 9t to 1(9t + 18t) inches -...031 -...032 -...034 -...035 -...030 -...023 -...028 -...028 -...026 -...026 -...038 -...036 -...036

Notes: All values are reduced to normal gravity (Lat. 45°) by applying a correction of -.070 in.

The Gazette for October 1920 was not available. The "Annual Report" for 1920 contains means of pressure at 9^h reduced to Mean Sea Level, and a correction of -.565 in. has been applied in order to reduce the mean for October to 509 ft., $\frac{1}{3}(9^h+18^h)$ and Lat. 45° .

TEMPERATURE.

Authorities: As for Pressure.

Site: As for Pressure.

Observations: The standard adopted is the mean of the mean daily maximum and the mean daily minimum. These figures were unreliable in certain months and the values in italics' have been computed from the 9^h dry bulb observations by means of the following corrections obtained from the records of other years which appeared to be reliable.

Jan. Feb. Mar. Apr. May June July Aug. Sept. Oct. Nov. Dec. 1 (M + m) °F. -0.3 -0.3 -0.5 -0.8 -1.0 -1.0 -0.9 -0.9 -1.1 -1.2 -1.1 -0.7 PRECIPITATION.

Authorities and Site: As for Pressure.

TRINIDAD

Lat. 10° 40′ N. Long. 61° 31′ W.

PRESSURE.

Authorities:

1862 February to 1879 December. Appendix to Report on the Botanic Gardens, Trinidad for 1880.

1880 to 1882. Appendix to Report on the Botanic Gardens, Trinidad for 1882.

1883 to 1884. Appendix to Report on the Botanic Gardens, Trinidad for 1883 and 1884.

1885. No information available.

1886. Manuscript data communicated by the Director of Agriculture, Trinidad.

1887 January to May. Appendix to Report on the Botanic Gardens, Trinidad, for 1887.

1887 June to 1899 November. Manuscript returns communicated by the Superintendent, Botanic Gardens, and filed in the Meteorological Office, London.

1899 December to 1906. Reports on the Botanic Gardens. 1907 to 1908. Meteorological returns for the Royal Botanic Gardens.

1909 to 1920. Trinidad Blue Books.

Site: The observations were taken at St. Ann's where the barometer was at a height of 133 ft., from 1862 to 1900 June, and at St. Clair Experiment Station, where the barometer was at a height of 72 ft., from 1900 July to 1920.

Changes of Instrument: The instrument in use up to 1884 is unknown. In 1887, there were three barometers:

Negretti & Zambra with index error correction... None Adie's Marine with index error correction....+.001 in. Callaghan Standard with index error correction...-.005 in.

It is not known which barometer was used, but it is presumed that the necessary corrections have been made.

In 1925, barometer Adie, London, 292, with no known index error correction was in use, but it is not known when this barometer was taken into use.

Changes of Hours of Observation:

1862 February to 1884. $9\frac{1}{2}^{h}$ and $15\frac{1}{2}^{h}$.

1887 January to March. 9h and 15h.

1887 April to 1920. 7h and 15h.

All values have been corrected to the mean of 24 hours by corrections (Table A) based on observations at Barbados.

Notes: On page 1 of the 1888 Report on the Botanic Gardens,
Trinidad, it is stated that the pressure values previous to January 1889 are too low by .118 in. This
correction of +.118 in. has been applied from
1862 February to 1888 December.

In a report on the station received in the Meteorological Office, London, in 1925, it is stated that the height

correction applied to the pressure values for a height of 72 ft. is +.102 in. This is too high by .027 in., and a correction of -.027 in. has been applied from 1900 July to 1920.

All values have been corrected to normal gravity (Lat. 45°) by applying a correction of -.072 in.

TEMPERATURE.

Authorities: As for Pressure.

Site: As for Pressure. No correction has been applied for the change of site. Inspection of the daily observations covering the change indicates that the correction required would be small.

Observations: All values have been corrected to the mean of 24 hours, by corrections (Table B) based on 3½ years observations at Trinidad.* The corrections were applied to the readings at the following hours:

1862 February to 1884. $\frac{1}{2}(9\frac{1}{2}+15\frac{1}{2})^h$.

1887 January to March. $\frac{1}{2}(9+15)^{h}$.

1887 April to 1920. $\frac{1}{2}(7+15)^{h}$.

PRECIPITATION.

Authorities: As for Pressure, with the addition of 1885 and 1886 from the Trinidad Blue Book, 1919.

Site: As for Pressure. No correction has been applied for the change of site.

TABLE A.—Corrections Applied to the Pressure Values to Reduce to the Mean of 24 Hours.

Table B.—Corrections Applied to the Temperature Values to Reduce to the Mean of 24 Hours

^{*} Hann, J. von. Der Tägliche Gang der Temperatur in der Ausseren Tropenzone. A. Das Amerikanische und Afrikanische Tropengebiet. Wien, 1907.

NORTH PACIFIC HAWAIIAN ISLANDS

HONOLULU

Lat. 21° 19' N. Long. 157° 52' W.

PRESSURE.

Authorities:

1883 to 1890 March. Report of Assistant in Charge of Meteorology, Honolulu, 1890, p. 23.

1891 to 1903. Weather Record for Honolulu and the Hawaiian Islands 1903, p. 40.

1904 September to 1920. Manuscript data supplied by the United States Weather Bureau, Washington.

Site: In 1883 the height of the barometer above Mean Sea Level was 34 ft. and in 1892, 50 ft. The date of change is not known, but the observations up to 1903 are published at Mean Sea Level and it is presumed that the appropriate corrections have been applied.

1892 to 1903......50 ft. 1904 September to 1920......38 ft.

All values have been corrected to a height of 38 ft. by applying a correction of -.040 in. to the values from 1883 to 1903.

Hours:

1883 to 1890 March. 10h, 15h, 21h.

1891 to 1903. 9h, 15h.

1904 September to 1920. 8h, 20h.

Notes: The values from 1883 to 1890 March have been corrected to normal gravity (Lat. 45°) by applying a correction of -.057 in. From 1891 to 1903 the gravity correction is stated to have been applied in the published values and from 1904 to 1920 the gravity correction was applied by the U. S. Weather Bureau.

The pressure data from 1892 to 1925 were reduced to a uniform series, $\frac{1}{2}(8^h+20^h)$, by Mr. R. H. Weightman of the U. S. Weather Bureau. The same mean correction was applied to the monthly and annual values of 1891.

An approximate correction of +.030 was applied to the observations from 1883 to 1890 to correct to the same hours, $\frac{1}{2}(8^h+20^h)$, and to the same level, 38 ft.

MEAN TEMPERATURE.

Authorities: 1883 to 1889. Weather Record for Honolulu and the Hawaiian Islands, 1903, p. 41.

1890 to 1920 manuscript data supplied by the United States Weather Bureau, Washington.

Site: Previous to 1904 September, temperature observations were made at the corner of Dole and Alexander Streets, about 2 miles from the location of the Weather Bureau Station on the Alexander Young Building, occupied September 1, 1904. Elevation in first location about 50 ft, and the latter 111 ft.

Observations: The standard adopted is the mean of the mean daily maximum and mean daily minimum temperatures. From 1883 to 1889 the observations at 6^h , 14^h and 21^h only were available, and these values have been corrected to $\frac{1}{2}(M+m)$ by applying a correction based on data for the years 1899 to 1903, as follows:

Jan. Feb Mar. Apr. May June July Aug. Sept. Oct. Nov. Dec. ${}^{\bullet}$ F. ${}^{\bullet}$ 66 + 14h + 21h) to ${}^{\downarrow}$ 6(M + m) + 0.21 + 0.27 + 0.39 + 0.49 + 0.55 + 0.57 + 0.57 + 0.57 + 0.53 + 0.45 + 0.83 + 0.23 PRECIPITATION.

Authorities: 1874 to 1920 manuscript data supplied by the United States Weather Bureau, Washington.

Site: Records made by different observers but all within short distances of the present Weather Bureau location.

Elevations range from 50 ft. to 111 ft. above the ground. No corrections have been applied.

- Instruments: The following are the barometers used and the index error corrections applied:
 - 1903 to 1907. H. J. Green+0.10 mm.
 - 1908 to 1911 March 10. Tonnelot+0.25 mm.
 - 1911 March 11 to 1922. Tonnelot-0.65 mm.
- Hours: The values are the means of observations at 2^h , 6^h , 10^h , 14^h , 18^h , 22^h .
- Notes: All values have been corrected to normal gravity (Lat. 45°) by applying a correction of -1.77 mm.

TEMPERATURE.

- Site and Instruments: H. J. Green thermometers were in use throughout the period.
 - 1903 to 1910 September. Thermometers exposed in an American type shelter, at a height of 2.30 m. above the ground.
 - 1910 October to 1922. Thermometers exposed in a tropical shelter, with single screen and double roof (the lower made of wood and upper made of nipa); the thermometers in this shelter were 4.25 m. above the ground.
- Hours: The values are the means of observations at 2^h, 6^h, 10^h, 14^h, 18^h, 22^h.

PRECIPITATION.

- Site and Instruments: A U. S. Standard rain gage was in use throughout the period.
 - 1903 to 1908 April 20. Rain gage exposed on the roof of the station house, at a height of 3.8 m. above the ground.
 - 1908 April 21 to 1910 October. Exposed on level ground nearer to the sea, at a height of 0.80 m. above the ground.
 - 1910 October to 1911 March. Exposure less open than the preceding ones.
 - 1911 March to 1922. Exposed on a roof, in a more open position than before, at a height of 3.8 m. above the ground.

MANILA

AUTHORITY.

Weather Bureau, Department of Agriculture and Natural Resources, Manila, Philippine Islands.

PRESSURE.

Site: The height of the barometer above Mean Sea Level was 14.2 m. throughout the period (1877 to 1922).

Instruments: A Fortin barometer was in use. The following are the index error corrections applied:

| 1887 to 1892 September 5+0.0 |)3 mm. |
|---------------------------------------|--------|
| 1892 September to 1901 October 17+0.2 | 25 mm. |
| 1901 October 18 to 1908 March 270.2 | ≥5 mm. |
| 1908 March 28 to 1915 May 150.0 |)5 mm. |
| 1915 May 20 to 1921 February 10.2 | 25 mm. |
| 1921 February 2 to 19220.0 | 5 mm. |

Hours: The values are the means of 24 hourly observations.

Notes: All values have been corrected to normal gravity (Lat. 45°) by applying a correction of -1.72 nm.

TEMPERATURE.

Site and Instruments:

- 1887 to 1903 Negretti & Zambra thermometers exposed in a standard screen on the Observatory tower which is 16 m. above the ground. The thermometers are 1.5 m. above the roof of the tower.
- 1904 to 1909. The station was transferred to a park, 121 m. ESE. of the Observatory tower. H. J. Green thermometers exposed in a tropical shelter without a screen but with a double roof, the lower made of nipa and the upper made of wood. The thermometers were 1.5 m. above the ground.
- 1910 to 1922. The station was transferred to a more open site in the park, 81 m. NNW. of the previous site. Thermometers exposed in a larger tropical shelter with a double roof, the lower made of wood and the upper made of nipa. The thermometers were 1.5 m. above the ground.

Hours: The values are the means of 24 hourly observations. PRECIPITATION.

Site and Instruments:

1887 to 1903. Various types of pluviometer were in use but chiefly a Symons or a Crossley type, made by Negretti and Zambra. The instruments were exposed on the Observatory tower, 16 m. above the ground.

1904 to 1923. A U. S. standard rain gage was in use. The rims of the rain gages were about 1 m. above the roof of the tower.

Hours: Previous to 1915, the rainfall referred to the civil day.

From 1915 onwards, the rainfall was for the 24 hours beginning at 6^h.

SOUTH AMERICA ARGENTINA

AUTHORITY.

The data from the Argentine Stations were prepared by the Climatological Section of the Argentine weather service (Oficina Meteorológica Nacional, Argentina).

SITES.

The early observers of the Argentine weather service were voluntary observers, and the exposures of the instruments were not standardized. Beginning with 1885 more systematic methods were introduced and moderate salaries paid to the observers. The instruments and exposures were standardized and inspected by travelling inspectors from the central office.

The thermometers are exposed in a standard louvred screen approximating in size to that used by the United States Weather Bureau. At most of the stations it is within 6 or 8 ft. of the earth's surface.

The standard rain gage is about 8 cm. in diameter and is attached to a post extending 1 to 2 m. above the ground.

Hours of Observation.

Until the end of 1903 observations were made at 7^h, 14^h, and 21^h. Beginning with January 1, 1904, they were made at 8^h, 14^h, and 20^h. The mean pressures given in the tables are the means of these hours corrected to the means of 24 hours. The mean temperatures are the means of the daily maxima and minima, ½(daily Max.+daily Min.) corrected to the mean of 24 hours by means of corrections derived from thermograph records. The rainfall at most of the stations was observed at 7^h or 8^h.

BAHIA BLANCA

HOURS OF OBSERVATION.

Some of the earlier years were from observations made at various combinations of hours, but all are corrected to mean of 24 hours.

SITE.

BUENOS AIRES

The meteorological observations in the city of Buenos Aires begin with those made by Sr. D. Manuel Eguía, 1856-1875. The next series were those of Sr. D. Emillo Rosetti at the Colegio Nacional, 1873-1897. A third series of observations was made in Calle Independencia by Calestino Zambra, 1893-1902. The next series were at the port works, 1901-1906. Finally, beginning with 1906, they were at the first class observatory inaugurated at Charcarita in the suburbs of Buenos Aires. These different sets of observations were compared and reduced to a uniform series at the Oficina Meteorológica.

Hours of Observation.

Hourly readings were obtained from barographs and thermographs checked by eye observations after 1891. Preceding that date observations at 7^h, 14^h, and 21^h are corrected to the mean of 24 hours.

SITE.

CORDOBA

The meteorological observations were begun at the Astronomical Observatory; but in 1885 the instruments were removed to the meteorological observatory established in that year.

HOURS OF OBSERVATION.

All values are reduced to the mean of 24 hours. Since 1884 hourly readings have been obtained from barographs and thermographs checked by eye observations several times a day.

Further details of the instruments used and exposures during the early years of observation are found in the Anales de la Oficina Meteorológica Nacional, Argentina.

GOYA

Hours of Observation.

7h, 14h and 21h or 8h, 14h and 20h corrected to mean of 24 hours.

Site: Port Works Station. In December 1922 the station was moved to Olinda's hill near Recife.

Hours of Observation: From 1887 to 1909 five tri-hourly observations were made between 6^h and 18^h. From 1910 to 1922 observations were made at 7^h, 14^h and 21^h.

Note: All values were corrected for temperature. They were also corrected to normal gravity at 45° Lat. by applying a correction of -2.0 mm.

TEMPERATURE.

No data obtained.

RAINFALL.

Authority: 1875 to 1909 data supplied by R. C. Mossman. 1910 to 1922 furnished by Directoria de Meteorologia, Brazil.

Site: Port Works.

RIO DE JANEIRO

PRESSURE.

Authority: Directoria de Meteorologia, Instituto Central, Brazil. Site: Observatorio do Castello until 1922, height 61.4 m. above sea-level. In 1923 the meteorological service was moved to a new site and the height of the barometer was 33.0 m. above sea-level. A correction of -2.4 mm. was applied to reduce the mean values to the old level. In 1924 the Service was

moved to the Palacio dos Estados where the height of the barometer was 18.3 m. above sea level. A correction of -3.7 was applied to the observed mean values to reduce them to the old level of 61.4 m.

Hours of Observation: The hours of observation are not given but are stated to be 24 hour means in the Reseau Mondial.

Note: A gravity correction of -1.4 mm. was applied to all the mean values to reduce them to Lat. 45° .

TEMPERATURE.

Authority: Robert C. Mossman.

Notes: The series of climatological observations taken at the Astronomical observatory of Rio de Janeiro from 1851 to 1890 have been summarised by Senhor E. Cruls in his well-known work, O Clevira do Rio de Janeiro (Rio de Janeiro 1892). The temperature data were not reduced to a homogeneous system, and there were different systems of exposure and hours of observation. The foregoing data are from observations after 1870 when the exposure of the thermometers was changed and has remained constant to date, viz. in a large pavilion with wooden louvres. hours of observation were 7, 13, and 17h from January 1871 to December 1873; 7, 10, 13 and 16h from January 1874 to June 1879; 4, 7, 10, 13, 16, 19, and 22h from July 1879 to June 1885 and afterwards at three hourly intervals beginning at 1h. The reductions to true mean of 24 hours were obtained from a comparison of the values at each of the above combinations of hours with the mean of the 8 observations per day given in extenso in Boletim Mensal for the five years 1900-1904 the corrections being as follows:

Minus corrections in Tenths of a Degree C. to bring observations to true mean temperature.

| | | | Jan. | Feb. | Mar. | Apr. | May | June | July | Λug. | Sept. | Oct. | Nov. 1 | Dec |
|------|-----------|------|------|------|------|------|-----|------|------|------|-------|------|--------|-----|
| | Period | | | | | | | | | | | | | |

| July | 1879-June | 1885 | 2 | 2 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 2 |

The original data have all had the above corrections applied before entering in the table. I am of the opinion that the minus corrections should be increased by 0.4° or 0.5° up to June 1879 as the data, i. e. mean monthly temperatures, seem too high but I have let the values stand as corrected above.

RAINFALL.

Authority and Sites: Same as for the pressure. On account of the removal of the gage from the Observatorio do Castello to the Torre Meteorologica in 1922, the values from July 1922 to April 1923 are only one half as large as the mean of 9 surrounding stations.

CHILE

AUTHORITY.

The data given were copied from the publications of the Chilean Meteorological Service by Robert C. Mossman, except for Punta Arenas, which were copied from "El Clima de Punta Arenas" by José Re, S. J., and from subsequent publications of the "Observatorio Meteorologico José Fagnano."

EXPOSURE OF INSTRUMENTS.

For most of the stations the exposures are not described.

At Punta Arenas the instruments are exposed in a tower connected with the church. In 1908-1909 a new tower was constructed especially for the meteorological observatory where it continues up to the present time. Hourly readings of the pressure are taken from a Richard barograph checked by readings of a Fortin barometer at 7^h, 14^h and 21^h.

The thermometers and a Richard thermograph are exposed in a window shelter.

The rain gage is exposed on the roof but is well protected from the wind.

Hours of Observation.

For Evangelistas the pressure corrections to bring to mean of 24 hours are very small and apply only to a few months of the year as follows:

7h-14h-21h. February -0.1, March -0.1.

7^h 26^m, 10^h, and 16^h. January +0.1, March to June +0.1, November +0.1.

8h-14h-21h, same as 7h-14h-21h.

At Punta Galera the hours of observation for pressure were 8h-14h-21h to July 1906, then 7h 26m. (Greenwich noon) 10h and 16h to December 1910 and 7h-14h-21h since. The corrections applied in tenths of millimeters were for these series (to reduce to mean of 24 hours) as follows deduced from hourly data at Valdivia:

Hours
8-14-21
0 0 -0.2 -0.1 -0.1 +0.1 0 0 -0.2 -0.1 -0.1
7-14-21
0 0 -0.1 -0.1 -0.1 -0.2 -0.2 -0.1 -0.1
0 0 -0.1 -0.2 -0.1 -0.1 -0.2
0 0 -0.1 -0.2 -0.1 -0.1
0 0 0 -0.1 -0.1 -0.1 -0.1

The temperature data for Galera are the mean of the max.+ min.(?)

The earlier Santiago data, 1861-1891 were means of 7^h, 14^h and 22^h corrected to mean of 24 hours, both for pressure and temperature. After 1892 the data are the means of 24 hours throughout the series.

Data for the years 1903 to 1906 at Iquique were derived from observations taken every two hours probably measured from a thermograph trace controlled by eye readings.

Data for the years 1900, 1901 and 1902 were from mean of observations taken at 8h-14h-21h brought to the mean of 24 hours by the following corrections derived from comparison with the above two hourly observations from January 1904 to July 1906 as follows:

Jan. Feb. Mar. Apr. May June July Aug Sept. Oct. Nov. Dec. -1.4 -1.5 -0.9 -0.5 -0.6 -0.3 -0.2 -0.6 -0.7 -0.7 -0.7 -1.4 -1.9

Data for the years 1907 to 1910 are from the mean of the max. and min., corrections having been determined from a comparison of the mean max. and min. with the means of $\frac{7^h + 14^h + 21^h + 21^h}{4}$ which figure in the table for the period

1911-1924. The years selected for obtaining the corrections were 1911 to 1914, the following being the corrections applied, to the mean of the max. and min.:

Jan Feb. Mar. Apr. May June July Aug. Sept. Oct. Nov. Dec. 0.0 --0.1 0.0 --0.1 0.0 --0.1 +0.1 +0.1 +0.1 -0.2

It is not possible to use any one series of data throughout, as previous to 1911 in common with all other stations in Chile except Santiago and Punta Arenas, different systems of hours were in vogue, and the minimum thermometer often out of order or broken for long periods. This latter is a very frequent defect with the Chilean data previous to 1911 and was due apparently to a lack of systematic inspection at the coastal stations. Fortunately the detection of errors in the minimum thermometer is easy as it is at once apparent from the increased mean daily range.

SANTIAGO

PRESSURE.

Earlier data, 1861-1892, are the means of observations at 7^h, 14^h and 22^h corrected to the mean of 24 hours, then the mean of hourly observations till 1915. From 1916 to 1921 they

are the means of 7^h, 14^h and 21^h reduced to the mean of 24 hours. The corrections used are as follows:

The apparent anomaly in the corrections to the mean of 24 hours is due to the circumstance that the earlier series, 1861 to 1892, were derived from term day observations. The corrections for 1916 to 1921 were derived from hourly values given in publications Nos. 5, 7, 11, 17 of the Instituto Central Meteorológico y Geofísico de Chile for the years 1911 to 1914.

TEMPERATURE.

The hours of observation were the same as for the pressure and the mean values for the intervals 1861-1892, and 1916 to 1921 were corrected to the mean of 24 hours. The other means were derived from hourly observations.

COLOMBIA BOGOTÁ

RAINFALL.

Authority: Observatorio Nacional de San Bartolome. Report of Pan American Congress, Washington, 1916. Noticia del nuevo observatorio con algunos datos sobre la climatologia y el magnetismo de Colombia.

DEMARARA

GEORGETOWN

PRESSURE.

Authority: The Science and Agriculture Department, Georgetown, Demarara, British Guiana.

Site: The height of the barometer cistern above Mean Sea Level was 6 ft. throughout the period (1887 to 1924).

Instrument:

1887 to 1923 October 15. A Fortin barometer No. 2194 was in use.

1923 October 16 to 1924. A Kew Pattern barometer No. 1540 was in use.

Hours of Observation:

1887 to 1907, December. 9h and 16h.

1907 December to 1913 June. 9h and 17h.

1913 July to 1924. 7h, 13h, and 18h.

The values 1887 to 1913 June, have been corrected to the mean of 7^h, 13^h, and 18^h by the following correc-

tions based on the observations at Barbados and Para:

Notes: All values have been corrected to normal gravity (Lat. 45°) by applying a correction of -2.5 mb.

TEMPERATURE.

Authority: The Science and Agriculture Department, Georgetown, Demarara, British Guiana.

Site: The height of the thermometers above Mean Sea Level was 4½ ft. throughout the period.

Observations: The values are the means between the mean daily maximum and the mean daily minimum.

PRECIPITATION.

Authority: British Guiana, Meteorological Observations.

URUGUAY MONTEVIDEO

SITE.

The Montevideo Station was at the "Prado," a large park about 7 km. from the sea until 1920 and then at the Port.

Hours of Observation.

Since January 1921 the observations have been at 7^h, 14^h and 21^h and the means are corrected to the Prado series and to the means of 24 hours throughout.

VENEZUELA CARACAS

PRECIPITATION.

The values are taken from the memoir "El Invierno en Caracas" by R. Alonzo Rojas. No date of publication is given but the introduction is dated July 1926.

FALKLAND ISLANDS

CAPE PEMBROKE

Lat. 51° 41' S. Long. 57° 42' W.

Authorities: 1895 to 1915. London, Air Ministry, Meteorological Office, Geophysical Memoirs, No. 15. The Climate and Weather of the Falkland Islands and South Georgia, by C. E. P. Brooks, London, 1920.

1916 to 1920. MS. data compiled by the Marine Division, Meteorological Office, London. The meteorological observations are taken by the Lighthouse Keeper and are entered in logs which are filed in the Marine Division.

Instruments: 1895 to 1914. Barometer no. 525, with an index error correction of -.001 in. at 29.5 ins. and +.001 in. at 30.0 ins.

1915 to 1916, August 12. Marine Barometer no. 75 with an index error correction of \pm .004 in.

1916 August 13 to 1920. Station Barometer no. 640 with an index error correction of +.002 in.

Hours of Observation: From 1895 to 1907 May and from 1908 August to 1920, the observations were taken at o^h, 4^h, 8^h, 12^h, 16^h, and 20^h.

Incomplete observations were taken from 1907 June to 1908 June, at 8h, 16h, and 20h, and these values were corrected to the mean of the six observations a day by applying the following corrections:

Jan. Feb. Mar. Apr. May June July Aug. Sept. Oct. Nov. Dec. +0.1 0 0 0 0 0 0 0 0 0 0 0.0 0 0 0

No observations were available for 1908 July.

Notes: All values have been corrected to normal gravity (Lat. 45°) by applying a correction of +0.6 mb.

The first observations taken in the Falkland Islands were by Sir James Ross in April to August 1842 (Voyage to the Southern Seas, vol. ii, pp. 428-437). Observations have been taken at Cape Pembroke Lighthouse since 1850, with occasional intervals. In January 1903, the station was inspected by the meteorologist of the "Scotia" and since that date the observations have been excellent. Prior to that date, however, the observations were probably less reliable.

MEAN TEMPERATURE.

Authorities:

1895 to 1902. MS. data compiled by the Marine Division, Meteorological Office, London.

1903 to 1904. Scientific Results of the "Scotia" Expedition, 1902-04, vol. ii., "Physics." Edinburgh, 1907:

1905 to 1920. As for Pressure.

Site: As for Pressure.

Observations: The standard adopted is the mean of the dry bulb observations taken at 0^h, 4^h, 8^h, 12^h, 16^h, 20^h

The values were missing in some months and the figures in italics are the means of 8^h, 16^h, and 20^h, corrected to the mean of the six observations a day, by applying the following correction:

Jan. Feb. Mar. Apr. May June July Aug. Sept. Oct. Nov. Dec. °F. -0.5 -0.5 -0.4 -0.2 0 0 0 -0.2 -0.4 -0.4 -0.5 -0.5 -0.5

1915 to 1920. Manuscript data supplied by the Governor, Falkland Islands and filed in the Meteorological Office, London.

Site: The height of the rain gage above Mean Sea Level is 6 ft.

The rim of the rain gage is 1 ft. above the ground.

ST. HELENA

Lat. 15° 57' S. Long. 5° 40' W.

Pressure.

Authorities: 1892 to 1920. Manuscript returns compiled by Henry S. Hands, Esq., until 1898 February and by A. L. C. Hands, Esq., since that date, and filed in the Meteorological Office, London.

Changes of Site: Some uncertainty exists about the actual height of the barometer at St. Helena. A change of site occurred on November 20, 1910, and the difference of elevation between the old and new sites, as determined by survey, is 75 ft. Height of cistern above Mean Sea Level was stated in 1892 to be 1905 ft., making the present height 1980 ft. A re-survey by Capt. Mainwaring gave the present height as 1900 ft., but a comparison with some earlier observations at a low-level station and with isobaric charts of the South Atlantic suggests that this determination is about 100 ft. too low. An allowance has been made for the change in height of 75 ft., by applying the following corrections to the values from 1892 to 1910, November 20:

Jan. Feb. Mar. Apr. May June July Aug. Sept. Oct. Nov. Dec. Inch -.075 -.075 -.075 -.075 -.075 -.075 -.075 -.075 -.076 -.076 -.076 -.076 -.076 -.076 -.076

Instrument: Barometer no. A. 202 by Adie, with an index error correction of -.014 in. was in use throughout the period.

Hours: The hour of observation was 9^h, local time, throughout the period.

Notes: All values have been corrected to normal gravity (Lat. 45°) by applying a correction of -.061 in.

MEAN TEMPERATURE.

Authorities: As for Pressure.

Site: The height of the thermometer screen above Mean Sea Level is about 1900 ft. There has been no change of site during the period of observations.

Hours: The hour of observation was 9h, local time, throughout the period.

PRECIPITATION.

Authorities: As for Pressure.

Site: The site of the rain gage was changed on November 20, 1910. Previous to that date the height was given as 1890 ft., and subsequently as 2020 ft., but for the reasons given under "Pressure" these heights are only approximate.

SOUTH GEORGIA (GRYTVIKEN)

Lat. 54° 13′ S. Long. 36° 33′ W. H_b=4 m.

AUTHORITY.

Direccion de Meteorologia, Argentina.

Pressure.

The pressure data have been derived from hourly barograph values checked by eye observations.

TEMPERATURE.

From January 1905 to June 1907 the original means deduced from the tri-daily observations were too high owing to faulty exposure of the thermometers which were affected by solar radiation. For this period the means were derived from the observation at 8^h brought to mean of day and by the mean of the mean minima similarly corrected. The following were the corrections applied:

8 hours. +0.2 +0.2 +0.3 +0.2 +0.2 +0.1 +0.3 +0.4 +0.2 -0.1 -0.2 -0.1 +0.1 Mean min. +2.8 +3.0 +2.9 +2.8 +2.6 +2.7 +2.9 +3.1 +2.9 +2.8 +2.7 +2.8 +2.8

The mean temperature is thus derived from the mean of the 8 hours and mean minimum temperature corrected in this way. During the five months April to August the error resulting from the faulty exposure was small, averaging 0.4°.

The years or months marked with an * after June 1908 have been derived from the mean of the 8h-14h-20h observations brought to mean of day by the following minus corrections:

O.5 O.4 O.5 O.2 O.1 O.1 O.1 O.0 O.2 O.4 O.4 O.5 O.8

All the other months are derived from the mean of the hourly thermograph records controlled by eye readings at 8h-14h-20h.

SOUTH ORKNEYS

LAURIE ISLAND

AUTHORITY.

Oficina Meteorologica Argentina, Buenos Aires, Argentina. Pressure.

Site: The height of the barometer cistern above Mean Sea Level was 7 m. throughout the period (1903 to 1923).

Hours: The values given are the means of 24 hourly observations.

Notes: All values have been corrected to normal gravity (Lat. 45°) by applying a correction of +1.0 mm. The values for

1903 January to March have been interpolated from the charts in "Deutsche Sudpolar Expedition 1901-1903." Meteorologischer Atlas von W. Meinardus u. L. Mecking. Berlin, 1911.

TEMPERATURE.

Site: The height of the thermometer above Mean Sea Level was 7.7 m. throughout the period.

Site: As for Pressure.

NEW ZEALAND

AUCKLAND

AUTHORITY.

Dominion Meteorological Office, Wellington, New Zealand.

Pressure.

After investigation it was found that there were no barometric records from Auckland, sufficiently reliable for inclusion.

TEMPERATURE.

The standard adopted is the mean of the mean daily maximum and mean daily minimum.

Site: In 1866 the height of the Observatory which was situated in a Park 11 miles from the Harbor was given as 140 ft. above Mean Sea Level. In the year 1868 the Observatory was removed to a height of 256 ft. In 1888 the instruments were again removed to the roof of the Museum, ½ mile from the Harbor, and at a height of 125 ft. above Mean Sea Level. Owing to radiation from the slate roof, this station was condemned, and on September 1, 1909 the instruments were finally removed to the Albert Park, 1 mile from the Harbor and at about the same altitude.

PRECIPITATION.

Site: See Temperature.

CHRISTCHURCH

AUTHORITY.

Dominion Meteorological Office, Wellington, New Zealand.

Pressure.

Site: The barometer is situated in the Magnetic Observatory at a height of 25 ft. above Mean Sea Level (1905 to 1923).

Instrument: A Kew pattern barometer was in use throughout the period.

Hours: The hour of observation was 9^h throughout the period. Notes: All values have been corrected to normal gravity (Lat. 45°) by applying a correction of -.004 in., and to Mean Sea Level.

TEMPERATURE.

Site: From 1864 to 1880 the Observatory was six miles from the sea and was 21 ft. above Mean Sea Level. This Observatory was discontinued about 1880. Records from the Magnetic Observatory are available from January 1, 1905. The altitude of this station is 25 ft. above Mean Sea Level.

Hours: The standard adopted is the mean of the mean daily maximum and mean daily minimum temperature.

HOKITIKA

AUTHORITY.

Dominion Meteorological Office, Wellington, New Zealand.

Site: The Observatory is $\frac{1}{4}$ mile from the sea, and the height has been estimated as from 8 to 10 ft. above Mean Sea Level (1866 to 1923).

PRESSURE.

Hours: The hour of observation is 9^h throughout the period. Notes: All values have been corrected to normal gravity (Lat. 45°) by applying a correction of -.006 in., and to Mean Sea Level.

TEMPERATURE.

The standard adopted is the mean of the mean daily maximum and the mean daily minimum temperatures.

PRECIPITATION.

Site: See above.

WELLINGTON

AUTHORITY.

Dominion Meteorological Office, Wellington, New Zealand.

SITE.

Wellington Observatory was 1 mile from the Harbor and 90 ft. above Mean Sea Level in 1866. In 1869 it was removed to a

site 60 ft. above Mean Sea Level; next year to a permanent site above the Sydney Street cemetery, 140 ft. above Mean Sea Level. The barometer, however, was kept at the Museum, at an altitude of about 25 ft. On June 19, 1906 this Observatory was removed to what is known as Mount Cook, at a height of 110 ft. above Mean Sea Level. It continued there until July 1912 when it was removed to the present site, at a height of 10 ft. above Mean Sea Level, and near the water front.

Pressure.

Hours: The hour of observation is 9h throughout the period.

Notes: All values have been corrected to normal gravity (Lat. 45°) and to Mean Sea Level.

TEMPERATURE.

The standard adopted is the mean of the mean daily maximum and the mean daily minimum temperatures.

SAMOA

APIA

Lat. 13° 48′ S. Long. 171° 46′ W.

PRESSURE AND TEMPERATURE.

Authorities: "A Summary of the Meteorological Observations of the Samoa Observatory (1890-1920)" by G. Angenheister. Wellington, 1924.

Notes on station and observations are given in this publication.

1920-1925. Manuscript data supplied by the Director, Apia Observatory, Samoa.

Notes: From 1890 to 1910, with the exception of the year 1908, observations were taken daily at 7^h, 14^h and 21^h. These were corrected to the mean of 24 hours and to the site of the new observatory at Mulinuu by simultaneous observations from November 1902 to December 1904.

Since November 1902 the Samoa Observatory at Mulinuu, Apia, has made observations with recording instruments standardized daily.

PRECIPITATION.

Authorities: Manuscript data supplied by the Director, Apia Observatory, Samoa.

Notes: Rainfall observations were taken at Sogi from 1890 to 1910 and at Mulinuu from November 1902 to 1920. By a careful comparison made at Apia, the necessary co-efficient to reduce the Sogi observations to those at Mulinuu was found to be .909 and the observations at Sogi were therefore multiplied by this factor so that the series is now comparable.

^{*}A note explaining this symbol was not found. It probably indicates incomplete observations. [Editor.]

 $[\]dagger$ There is no certainty that pressure data referring to 1916-1918 have been reduced to the altitude of the previous position of the barometer, which was apparently 7 m lower.

TOBOLSK, SIBERIA

^{*}A note explaining this symbol was not found. It probably indicates incomplete observations. [Editor.]

[†] The mean monthly temperatures from July 1884 to June 1890, for May and June 1895 and from May 1897 to November 1899 should be corrected, for the purpose of reducing them to the absolute altitude 98 m., the correction being -0.3° . The annual mean temperatures reduced to the same height will be 1888 -0.6° , 1899 -0.6° , 1893 -1.3° , 1898 -0.3° , 1891 -1.3° .
